Encyclopedia of Agriculture and Food Systems, Second Edition, Five Volume Set addresses important issues by examining topics of global agriculture and food systems that are key to understanding the challenges we face. Questions it addresses include: Will we be able to produce enough food to meet the increasing dietary needs and wants of the additional two billion

people expected to inhabit our planet by 2050? Will we be able to meet the need for so much more food while simultaneously reducing adverse environmental effects of today's agriculture practices? Will we be able to produce the additional food using less land and water than we use now? These are among the most important challenges that face our planet in the coming decades. The broad themes of food systems and people, agriculture and the environment, the science of agriculture, agricultural products, and agricultural production systems are covered in more than 200 separate chapters of this work. The book provides information that serves as the foundation for discussion of the food and environment challenges of the world. An international group of highly respected authors addresses these issues from a global perspective and provides the background, references, and linkages for further exploration of each of topics of this comprehensive work. This book provides updated information about applications of ion chromatography (IC) in food science, such as food quality control, food authentication and analysis of residues in certain food products. Among liquid chromatography methods, IC can be considered one of the most valuable analytical tools, an advantageous environmentally friendly technique able to provide a convenient determination of various analytes such as anions, cations, organic acids, carbohydrates, amines, amino acids, aminoglycosides, proteins, peptides, etc. Recent developments such as in-line eluent generation systems, capillary IC and combustion IC, are also described. The book is intended to serve as an organized resource for students, researchers and food analysts, but can be a relevant support for researchers from related fields. It highlights that IC can be even more powerful and efficient when more complex equipment is available, while proper knowledge empowers the user to obtain relevant data from this.
