**Heavy Vehicle Event Data
Recorder Interpretation**

Christopher D Armstrong
2018-11-02 The last ten years
have seen explosive growth in
the technology available to the
collision analyst, changing the
way reconstruction is practiced
in fundamental ways. The
greatest technological
advances for the crash
reconstruction community have

come in the realms of
photogrammetry and digital
media analysis. The
widespread use of scanning
technology has facilitated the
implementation of powerful
new tools to digitize forensic
data, create 3D models and
visualize and analyze crash
vehicles and environments. The
introduction of unmanned
aerial systems and
standardization of crash data
recorders to the crash
reconstruction community have
enhanced the ability of a crash
analyst to visualize and model
the components of a crash
reconstruction. Because of the
technological changes
occurring in the industry, many
SAE papers have been written
to address the validation and
use of new tools for collision
reconstruction. Collision
Reconstruction Methodologies
Volumes 1-12 bring together
seminal SAE technical papers
surrounding advancements in
the crash reconstruction field.
Topics featured in the series
include: • Night Vision Study
and Photogrammetry • Vehicle
Event Data Recorders •
