The First Sourcebook on Asian Research in Mathematics Education - 2 Volumes

Bharath Sriraman
2015-08-01 Mathematics and Science education have both grown in fertile directions in different geographic regions. Yet, the mainstream discourse in international handbooks does not lend voice to developments in cognition, curriculum, teacher development, assessment, policy and implementation of mathematics and science in many countries. Paradoxically, in spite of advances in information technology and the “flat earth” syndrome, old distinctions and biases between different groups of researcher’s persist. In addition limited accessibility to conferences and journals also contribute to this problem. The International Sourcebooks in Mathematics and Science Education focus on under-

represented regions of the world and provides a platform for researchers to showcase their research and development in areas within mathematics and science education. The First Sourcebook on Asian Research in Mathematics Education: China, Korea, Singapore, Japan, Malaysia and India provides the first synthesized treatment of mathematics education that has both developed and is now prominently emerging in the Asian and South Asian world. The book is organized in sections coordinated by leaders in mathematics education in these countries and editorial teams for each country affiliated with them. The purpose of unique sourcebook is to both consolidate and survey the established body of research in these countries with findings that have influenced ongoing research agendas and informed

practices in Europe, North America (and other countries) in addition to serving as a platform to showcase existing research that has shaped teacher education, curricula and policy in these Asian countries. The book will serve as a standard reference for mathematics education researchers, policy makers, practitioners and students both in and outside Asia, and complement the Nordic and NCTM perspectives.

Social Innovation in Higher Education Carmen Păunescu
2022-01-01 This open access book offers unique and novel views on the social innovation landscape, tools, practices, pedagogies, and research in the context of higher education. International, multi-disciplinary academics and industry leaders present new developments, research evidence, and practice expertise on social innovation in higher education institutions (HEIs), across academic and professional disciplines. The book includes a selected set of

peer-reviewed chapters presenting different perspectives against which relevant actors can identify and analyse social innovation in HEIs. The volume demonstrates how HEIs can respond to societal challenges, support positive social change, and contribute to the development of international public policy discourse. It answers the question 'how does the present higher education system, in different countries, promote social innovation and create social change and impact'. In answering this question, the book identifies factors driving success as well as obstacles. Furthermore, it examines how higher education innovation assists societal challenges and investigates the benefits of effective social innovation engagement by HEIs. The interdisciplinary approach of the volume makes it a must-read for scholars, students, policy-makers, and practitioners of economics, education, business and management, political science,
