Risk Assessment and Resilience of Extreme Weather-Induced Disasters

Lingling Shen 2025-06-09 Under the impacts of climate change, the frequency and intensity of extreme weather events are increasing, posing significant challenges to global socio-economic development. Extreme weather, characterized by unexpected, unusual, severe, or unseasonal rainstorms, droughts, extreme temperatures, and wildfires, often leads to secondary hazards such as landslides, debris flows, mountain torrents, urban waterlogging, and agro-meteorological hazards. These cascading disaster chains exhibit unique spatial differences and require comprehensive risk assessment and resilience management. Recent advancements in meteorological observation networks, radar and satellite detection accuracy, and new meteorological data products have improved the monitoring and forecasting of extreme weather events. However, the regional dependencies and unpredictability of these events necessitate further research to better understand and mitigate the associated risks. There is a pressing need to link extreme weather forecasts with the prediction of secondary disasters to enhance preparedness and response strategies. This research topic aims to explore the risk assessment and resilience management of extreme weather-induced disasters. The primary objectives include understanding the mechanisms of extreme weather events, improving forecasting techniques, and developing effective strategies to mitigate the impacts of cascading secondary hazards. Specific questions to be addressed include: How can we enhance the accuracy of extreme weather

forecasts? What are the best practices for managing urban flooding and waterlogging? How can we improve the resilience of communities to agro-meteorological and hydro-meteorological disasters? By addressing these questions, the research aims to contribute to more effective disaster risk reduction and resilience-building efforts. To gather further insights into the risk assessment and resilience of extreme weather-induced disasters, we welcome articles addressing, but not limited to, the following themes: • Forecast of extreme weather events and cascading hazards; • Urban flooding and waterlogging; • Risk assessment and management of agro-meteorological disasters; • Monitoring, warning, and risk assessment of hydro-meteorological and geological disasters (landslides, debris flow, mountain torrents, etc.); • Analysis and review of major meteorological disaster chain events; • Research on developing disaster resilience.

The High Cost of Free Parking Donald Shoup 2017-10-20 One of the American Planning Association's most popular and influential books is finally in paperback, with a new preface from the author on how thinking about parking has changed since this book was first published. In this no-holds-barred treatise, Donald Shoup argues that free parking has contributed to auto dependence, rapid urban sprawl, extravagant energy use, and a host of other problems. Planners mandate free parking to alleviate congestion but end up distorting transportation choices, debasing urban design, damaging the economy, and degrading the environment. Ubiquitous free parking helps explain why our cities sprawl on a scale fit more for cars than for people, and why American motor vehicles now consume one-eighth of the world's total oil production. But it doesn't have to be this way. Shoup proposes new ways for cities to regulate parking - namely, charge fair market prices for curb parking, use the resulting revenue to pay for services in the neighborhoods that generate it, and remove zoning requirements for off-street parking. Such

measures, according to the Yale-trained economist and UCLA planning professor, will make parking easier and driving less necessary. Join the swelling ranks of Shoupistas by picking up this book today. You'll never look at a parking spot the same way again.

Using the Engineering Literature Bonnie A. Osif 2006-08-23 The field of engineering is becoming increasingly interdisciplinary, and there is an ever-growing need for engineers to investigate engineering and scientific resources outside their own area of expertise. However, studies have shown that quality information-finding skills often tend to be lacking in the engineering profession. Using the Engineerin

Solar Energy Andy Walker 2013-08-07 Solar Energy is an authoritative reference on the design of solar energy systems in building projects, with applications, operating principles, and simple tools for the construction, engineering, and design professional. The book simplifies the solar design and engineering process, providing sample documentation and special tools that provide all the information needed for the complete design of a solar energy system for buildings to enable mainstream MEP and design firms, and not just solar energy specialists, to meet the growing demand for solar energy systems in building projects.

Construction Project Scheduling and Control Saleh A. Mubarak 2015-04-13 Written by a career construction professional, this text about scheduling and project control addresses the average student, detailing all the steps clearly and without shortcuts. And now, for the first time, the book is part of a learning package that comes with access to an online course built around the book provided by online training leader Red Vector. Solved and unsolved exercises cover all subjects and computer software programs for construction are included for each chapter. The book, and by extension the class, presents precedence networks as the realistic solution to scheduling, the main part of project control, and introduces new concepts in CPM scheduling such as the author's own Dynamic Minimum Lag technique. The new edition includes

coverage of building image modeling (BIM), lean construction, sustainability, and other cutting edge construction topics.
