The Laws of Late Medieval Italy (1000-1500) Mario

Ascheri 2013-07-11 In The Laws of Late Medieval Italy Mario Ascheri examines the features of the Italian legal world and explains why it should be regarded as a foundation for the future European continental system. The deep feuds among the Empire, the Churches unified by Roman papacy and the flourishing cities gave rise to very new legal ideas with the strong cooperation of the universities, beginning with that of Bologna. The teaching of Roman law and of the new papal laws, which quickly spread all over Europe, built up a professional group of lawyers and notaries which shaped the new, 'modern', public institutions, including efficient courts (like the Inquisition). Politically divided, Italy was partly unified by the legal system, so-called (Continental)

common law (ius commune), which became a pattern for all of Europe onwards. Early modern Europe had for long time to work with it, and parts of it are still alive as a common cultural heritage behind a new European law system.

Adoption and Fosterage Practices in the Late Medieval and Modern Age

Marina Garbellotti
2016-02-26T00:00:00+01:00
In recent years historical studies on adoption and fosterage have greatly advanced, very likely due to the importance that such practices have acquired in our own societies. Also in the past - not only during Roman or Late Antique periods, but throughout the Middle Ages and the Modern Era as well - a rather significant number of

family units went through adoption and fosterage, experiencing these kinds of ties and relationships on the daily basis. Articles collected in this volume are aimed at analysing the various forms and methods by means of which the concept of "adoption" was interpreted and practiced during the Medieval and Early Modern periods, identifying especially relevant chronological points, examples from different regional and local contexts, reciprocal influences, and family relationships shaped by adoption.

A Companion to Medieval and Renaissance Bologna

2017-11-20 Long neglected by scholars, medieval and Renaissance Bologna is now recognized as a center of economic, political-constitutional, legal, and intellectual innovation, as the city that served as the cultural crossroads of Italy. The city's distinctive achievements and its transition from medieval commune to second largest city of the Renaissance Papal State is illuminated by essays that present the work of current historians, many made available in English for the first time, from the broadest possible perspective: from the material city with its porticoes, the conflicts that brought bloodshed and turmoil to its streets, the disputations of masters and students, and to the masterpieces of artists who laid the foundations for Baroque art. See inside the book.

The Two Latin Cultures and the Foundation of Renaissance Humanism in Medieval Italy Ronald G. Witt

2012-03-19 This book traces the intellectual life of the Kingdom of Italy, the area in which humanism began in the mid thirteenth century, a century or more before exerting its influence on the rest of Europe. Covering a period of over four and a half centuries, this study offers the first integrated analysis of Latin writings produced in the area, examining not only religious, literary, and legal texts. Ronald G. Witt characterizes the changes reflected in these Latin writings as products of the interaction of thought with economic, political, and religious tendencies in Italian society as well as with intellectual influences coming from abroad. His research ultimately traces the early emergence of humanism in northern Italy in the mid thirteenth century to the precocious development of a lay intelligentsia in the region, whose participation in the culture of Latin writing fostered the beginnings of the intellectual movement which

would eventually revolutionize all of Europe.

The Dynamics of Learning in Early Modern Italy David A.

pathbreaking history of early modern education argues that Europe's oldest university, often seen as a bastion of traditionalism, was in fact a vibrant site of intellectual innovation and cultural exchange. The University of Bologna was among the premier universities in medieval Europe and an international magnet for students of law. However, a long-standing historiographical tradition holds that Bologna—and Italian university education more broadly—foundered in the early modern period. On this view, Bologna's curriculum ossified and its prestige crumbled, due at least in part to political and religious pressure from Rome. Meanwhile, new ways of thinking flourished instead in humanist academies, scientific societies, and northern European universities. David Lines offers a powerful

counternarrative. While Bologna did decline as a center for the study of law, he argues, the arts and medicine at the university rose to new heights from 1400 to 1750. Archival records show that the curriculum underwent constant revision to incorporate contemporary research and theories, developed by the likes of René Descartes and Isaac Newton. From the humanities to philosophy, astronomy, mathematics, and medicine, teaching became more systematic and less tied to canonical texts and authors. Theology, meanwhile, achieved increasing prominence across the university. Although this religious turn reflected the priorities and values of the Catholic Reformation, it did not halt the creation of new scientific chairs or the discussion of new theories and discoveries. To the contrary, science and theology formed a new alliance at Bologna. The University of Bologna remained a lively hub of cultural exchange in the early modern period, animated by
