Accounting Shirley Carlon 2011-11-30 *Accounting: Building Business*

*Skills* 4th edition continues to provide students and academics with a well

written and accessible textbook, with ample illustrations and applications

to business, for a first course in accounting. The text is unique in the way

it balances a "user" and "preparer" perspective and integrates real

financial information to illustrate business decision choices and how

decisions are made using accounting information. The pedagogical

approach presented in the text has been tried and tested over many

years, and provides a constructive framework for students to learn

fundamental accounting concepts and processes. Through the use of real

company information and financial statements students will quickly

appreciate the use of accounting information. The textbook clearly

outlines to students how to account for typical business transactions and prepare financial statements - such as a balance sheet, income statement, and statement of cash flows - that communicate the financing, operating, and investing activities of a business. Whether a student is required to study one accounting subject, as part of a wider business degree, or undertake a major study of accounting the text builds a strong conceptual understanding of accounting and will develop skills that can be applied to an accounting and business environment. The integral role of financial statements for decision making is also emphasised in this text and is reinforced throughout by the Decision Toolkit in each chapter. Students are provided with an extensive set of tools necessary to make business decisions based on financial information. The fourth edition is designed to engage and educate students.
