In mathematics, general topology (or point set topology) is the branch of topology that deals with the basic set-theoretic definitions and constructions used in topology. In a general topological space, we cannot speak of balls around a point, because there is no notion of distance. However, we might still want to speak of 'small' regions around a point.

2.9. Example. (1) The set of all open rays $S = \{ (a, b) \mid a < b \}$ is a subbasis and the set $B = \{ (a, b) \mid a < b \}$ of all open intervals is a basis for the standard topology on \mathbb{R} (2.2.(5)).

General topology, also called point set topology, is the study of properties of sets and functions that relate to notions of continuity, connectedness, and various abstract conceptions of "closeness." This classic book is a systematic exposition of general topology. It is especially intended as background for modern analysis. Based on lectures given at the University of Chicago, the University of California ...
