*Translation Tools and Technologies* Andrew Rothwell

2023-04-18 To trainee

translators and established professionals alike, the range of tools and technologies now available, and the speed with which they change, can seem bewildering. This state-of-the-art, copiously illustrated textbook offers a straightforward and practical guide to translation tools and technologies. Demystifying the workings of computer-assisted translation (CAT) and machine translation (MT) technologies, *Translation Tools and Technologies* offers clear step-by-step guidance on how to choose suitable tools (free or commercial) for the task in hand and quickly get up to

speed with them, using examples from a wide range of languages. Translator trainers will also find it invaluable when constructing or updating their courses. This unique book covers many topics in addition to text translation. These include the history of the technologies, project management, terminology research and corpora, audiovisual translation, website, software and games localisation, and quality assurance. Professional workflows are at the heart of the narrative, and due consideration is also given to the legal and ethical questions arising from the reuse of translation data. With targeted suggestions for further reading at the end of each chapter to guide users in deepening their knowledge, this is the essential textbook for all courses in translation and technology within translation studies and translator training. Additional

resources are available on the Routledge Translation Studies Portal.

**Empirical Studies of Translation and**

**Interpreting** Caiwen Wang  
2021-05-30 This edited book is a collection of the latest empirical studies of translation and interpreting (T&I) from the post-structuralist perspective. The contributors are professors, readers, senior lecturers, lecturers, and research students from an international context. The contributions are characterised by five themes: Intervention in T&I Process of T&I Product of T&I T&I and technology T&I education These up-to-date topics are reflective of the shift in attitudes that is being witnessed as a new generation of translation scholars rejects the subjective assertions of previous generations, in favour of an altogether more rigorous

approach. The book will notably contribute to the development of T&I and enhance our knowledge of the areas. It will be a useful reference for academics, postgraduate research students, and professional translators and interpreters. The book will also play a role in proposing practical and empirically based ways of training for universities and the industry, so as to overcome traditional barriers to translation and interpreting learning. The book will additionally provide reference material for relevant professional bodies.

### **A Project-Based Approach to Translation Technology**

Rosemary Mitchell-Schuitevoerder 2020-06-15 A Project-Based Approach to Translation Technology provides students of translation and trainee translators with a real-time translation experience, with its translation platforms, management systems, and teamwork. This book is divided into seven chapters reflecting the building blocks of a project-based approach to translation technology. The first chapter identifies the core elements of translation environment tools and collaborative work methods, while Chapters 2 and 4 review the concept of translation memory and

terminology databases and their purposes. Chapter 3 covers machine translation embedded in the technology, and the other chapters discuss human and technological quality assurance, digital ethics and risk management, and web-based translation management systems. Each chapter follows a common format and ends with project-based assignments. These assignments draw and build on real-time contexts, covering the consecutive steps in the workflow of large and multilingual translation projects. Reviewing the many translation technology tools available to assist the translator and other language service providers, this is an indispensable book for advanced students and instructors of translation studies, professional translators, and technology tool providers.
