Assessment System-II summarizes information

on adaptive behavior and skills as well as general issues in adaptive behavior assessment with the goal of promoting sound assessment practice during uses, interpretations, and applications of the Adaptive Behavior Assessment System-II. Adaptive behavior and skills refer to personal qualities associated with the ability to meet one's personal needs such as communication, self-care, socialization, etc. and those of others. Data from measures of adaptive behavior have been used most commonly in assessment and intervention services for persons with mental retardation. However, the display of adaptive behaviors and skills is relevant to all persons. The Adaptive Behavior Assessment System-II (ABAS-II) provides a comprehensive, norm-referenced assessment of the adaptive behavior and skills of individuals from birth

through age 89. The comprehensive nature of the ABAS-II, ease in administration and scoring, and wide age range have resulted in its widespread use for a large number of assessment purposes. The book provides practical information and thus serves as a valuable resource for those who use the ABAS-II.

- Assists in the functional use of the ABAS-II
- Provides case studies illustrating use of the ABAS-II in comprehensive assessment and intervention planning
- Reviews scholarship on adaptive behaviors and skills
- Describes legal, ethical, and other professional standards and guidelines that apply to the use of the ABAS-II and other measures of adaptive behavior
- Discusses the use of the ABAS-II with autism, mental retardation; young children and those in elementary and secondary school; as well as incarcerated persons being evaluated for possible mental retardation

Essentials of Adaptive Behavior Assessment of

Neurodevelopmental Disorders Celine A. Saulnier 2018-04-03 A practical guide to adaptive behaviors across a range of neurodevelopmental disorders Adaptive behavior assessment measures independent living skills, including communication, social skills, personal care, and practical work skills. For individuals with intellectual disabilities, evaluation of these skills is a critical tool for measuring eligibility and can identify specific skills that must be learned before effective educational interventions can be implemented. Essentials of Adaptive Behavior Assessment of Neurodevelopmental Disorders describes the role of adaptive behavior in assessment and treatment, and provides clear guidance for measurement. Case samples provide real-world illustration of behaviors and assessment, and systematic comparison of various measures are presented and explained to better inform planning. Individual chapters outline specific adaptive behaviors across a range of

neurodevelopmental disorders, giving clinicians, practitioners, students, and researchers a better understanding of diagnostic differentials and how to place independent skill programming in treatment and intervention. Plan intervention and treatment based on accessible measurement guidelines across a range of disorders Gain a deeper understanding of adaptive functioning specific to ADHD, autism spectrum disorders, disruptive behavior disorders, and genetic disorders Compare and contrast current measures to evaluate their strengths, weaknesses, and areas of overlap Quickly locate essential information with Rapid Reference and Caution boxes For individuals with neurodevelopmental disorders, adaptive behaviors are the keys to independence; without them, these individuals will perpetually struggle with achieving optimum independence without the basic skills needed to function at home, in school, and in the community. Assessment allows these skills to be factored in to treatment and

intervention planning, and can help improve the outcomes of other intervention methods. Essentials of Adaptive Behavior Assessment of Neurodevelopmental Disorders clarifies the assessment of these important behaviors, helping clinicians make more informed decisions around diagnosis, education, and treatment planning.
