Web3 Alex Tapscott 2023-09-19 A WALL STREET JOURNAL AND GLOBE AND MAIL BESTSELLER An essential introduction and guide to navigating the next Internet revolution—everything from the metaverse and NFTs to DAOs, decentralized finance, and self-sovereign identity—from the co-author of the international bestseller *Blockchain Revolution*. The Web, and with it the Internet, are entering a new age. We've moved from the "Read-only Web," which had little functionality for interacting with content, to the "Read-Write Web," which offered seemingly endless collaborative opportunities, from sharing with our favorite people to shopping at our favorite brands. But the profusion of cyberattacks, data hacks, and online profiling have left many of us to view digital life as a Faustian bargain in need of a major rethink. That rethink is Web3, the "Read-Write-Own Web"—a decentralized Internet where individuals own their own identities and can securely trade assets like money, securities, intellectual property, and art peer to peer. Made possible by blockchains, the foundational technology of bitcoin, Web3 promises the biggest shake up of business since the invention of double-entry bookkeeping in the Middle Ages. It is the Internet's new frontier. In Web3, award-winning author and technology investor Alex Tapscott provides a cutting-edge guide to the Internet's next era. Covering everything from the metaverse and non-fungible tokens to DAOs, decentralized finance, and self-sovereign identity, this indispensable, forward-thinking book describes the building blocks and often hidden technologies that will be foundational to our cultural and economic

progress.

Security and Privacy in Social Networks Yaniv Altshuler 2012-08-14 *Security and Privacy in Social Networks* brings to the forefront innovative approaches for analyzing and enhancing the security and privacy dimensions in online social networks, and is the first comprehensive attempt dedicated entirely to this field. In order to facilitate the transition of such methods from theory to mechanisms designed and deployed in existing online social networking services, the book aspires to create a common language between the researchers and practitioners of this new area- spanning from the theory of computational social sciences to conventional security and network engineering. *Artificial Intelligence Using Federated Learning* Ahmed A Elngar 2024-12-30 Federated machine learning is a novel approach to combining distributed machine learning, cryptography, security, and incentive mechanism design. It allows organizations to keep sensitive and private data on users or customers decentralized and secure, helping them comply with stringent data protection regulations like GDPR and CCPA. *Artificial Intelligence Using Federated Learning: Fundamentals, Challenges, and Applications* enables training AI models on a large number of decentralized devices or servers, making it a scalable and efficient solution. It also allows organizations to create more versatile AI models by training them on data from diverse sources or domains. This approach can unlock innovative use cases in fields like healthcare, finance, and IoT, where data privacy is paramount. The book is designed for researchers working in Intelligent Federated Learning and its related applications, as well as technology development, and is also of interest to academicians, data scientists, industrial professionals, researchers, and students.

The papers are organized in the following topical sections: access control and authentication; identity and trust management; privacy and confidentiality management; information systems security; security policies/legal issues; and trust and privacy in mobile and pervasive environments.

Blockchain for Information Security and Privacy Udai Pratap Rao 2021-12 "The book presents an integrated view of blockchain for systems security and privacy. It identifies issues of utilizing blockchain in applications including smart contracts, healthcare, and finance. It then explains security and privacy techniques including representative consensus algorithms, hash chained storage, and mixing protocols"--

First International IEEE Security in Storage Workshop 2003 This workshop was established to focus attention on the weaknesses in security of stored information, advance the technologies necessary for Security in Storage, and bring together prominent members of the storage, cryptography, and networking communities. Once viewed as fortresses insulated from outside threats, storage systems are now clearly recognized as being just as vulnerable as any other IT system. Whether stored information is dispersed or concentrated in centralized facilities, controllable access must be assured.
