What is a Differential Equation

A differential equation is any equation of some unknown function that involves some derivative of the unknown function. Classical example is Newton's law of motion. The ... Differential equations arise in a variety of subject areas, including not only the physical sciences but also such diverse fields as economics, medicine, psychology, and operations research. Theorem 1 (Superposition Principle). Let $y_1, y_2 : (a, b) \rightarrow \mathbb{R}$ be two solutions of the homogeneous equation (10). Then for any two real numbers α and β the function $y_3(x) = \alpha y_1(x) + \beta y_2(x)$ is again a ... This handout will serve as an introduction to differential equations and will cover topics including identifying differential equations, solving first-order equations, verifying solutions to differential ...

Overview: The language of differential forms puts all the theorems of this Chapter along with several earlier topics in a handy single framework. The introduction here is brief.

Introduced here are notation, definitions and background results suitable for use in differential equations.

Prerequisites include college algebra, coordinate geometry, differential calculus and integral calculus. Know the definition of a differential equation. Know our first and second most important equations and their solutions. Be able to derive the differential equation modeling a physical or geometric situation. ...
