(Applause Books). Jean Shepherd (1921-1999), master humorist, is best known for his creation A Christmas Story , the popular movie about the child who wants a BB gun for Christmas and nearly shoots his eye out. What else did Shepherd do? He is considered by many to be the Mark Twain and James Thurber of his day. For many thousands of fans, for decades, "Shep" talked on the radio late at night, keeping them up way past their bedtimes. He entertained without a script, improvising like a jazz musician, on any and every subject you can imagine.

He invented and remains the master of talk radio. Shepherd perpetrated one of the great literary hoaxes of all time, promoting a nonexistent book and author, and then brought the book into existence. He wrote 23 short stories for Playboy , four times winning their humor of the year award, and also interviewed The Beatles for the magazine. He authored several popular books of humor and satire, created several television series and acted in several plays. He is the model for the character played by Jason Robards in the play and movie A Thousand Clowns , as well as the inspiration for the Shel Silverstein song made famous by Johnny Cash, "A Boy Named Sue." Readers will learn the significance of innumerable Shepherd words and phrases, such as "Excelsior, you fathead," and observe his constant confrontations with

the America he loved. They will get to know and understand this multitalented genius by peeking behind the wall he built for himself a wall to hide a different and less agreeable persona. Through interviews with his friends, co-workers and creative associates, such as musician David Amram, cartoonist and playwright Jules Feiffer, publisher and broadcaster Paul Krassner, and author Norman Mailer, the book explains a complex and unique genius of our time.

"Shepherd pretty much invented talk radio ... What I got of him was a wonder at the world one man could create. I am as awed now by his achievement as I was then." Richard Corliss, Time magazine online

[Advances in Open Domain Question Answering](#) Tomek Strzalkowski 2006-10-07

Automated question answering - the ability of a machine to answer questions, simple or complex, posed in ordinary human language - is one of today's most exciting technological developments. It

has all the markings of a disruptive technology, one that is poised to displace the existing search methods and establish new standards for user-centered access to information. This book gives a comprehensive and detailed look at the current approaches to automated question answering. The level of presentation is suitable for newcomers to the field as well as for professionals wishing to study this area and/or to build practical QA systems. The book can serve as a "how-to" handbook for IT practitioners and system developers. It can also be used to teach advanced graduate courses in Computer Science, Information Science and related disciplines. The readers will acquire in-depth practical knowledge of this critical new technology.

Engineering Trivia Questions And Answers

2000-09-28 In this classic work that continues to inspire many readers, Jim Lovelock puts forward his idea that the Earth functions as a single organism. Written for non-scientists, *Gaia* is a journey through time and space in search of evidence in support of a radically different model of our planet. In contrast to conventional belief that life is passive in the face of threats to its existence, the book explores the hypothesis that the Earth's living matter influences air, ocean, and rock to form a complex, self-regulating system that has the capacity to keep the Earth a fit place for life. Since *Gaia* was first published, Jim Lovelock's hypothesis has become a hotly debated topic in scientific circles. In a new Preface to this edition, he outlines his view of the present state of the debate. Oxford Landmark Science books are 'must-read' classics of modern science writing which have crystallized big ideas, and shaped the way we think.
