## **General Equilibrium Foundations of Finance**

Thorsten Hens 2013-03-09 The purpose of this book is to give a sound economic foundation of finance. Finance is a coherent branch of applied economics that is designed to understand financial markets in order to give advice for practical financial decisions. This book argues that for a sound economic foundation of finance the famous general equilibrium model which in its modern form emphasizes the incompleteness of financial markets is well suited. The aim of the book is to demonstrate that financial markets can be meaningfully embedded into a more general system of markets including, for example, commodity markets. The interaction of these markets can be described via the well known notion of a competitive equilibrium. We argue that for a sound foundation this competitive equilibrium should be unique. In a first step we demonstrate that this essential goal cannot of be achieved based only on the rationality principle, i. e. on the assumption utility maximization of some utility function subject to the budget constraint. In particular we show that this important lack of structure is disturbing as well for the case of mean-variance utility functions which are the basis of the Capital Asset Pricing Model, one of the cornerstones of finance. The final goal of our book is to give reasonable restrictions on the agents' utility functions which lead to a well determined financial markets model.

## **Reader's Guide to the Social Sciences**

Jonathan Michie 2014-02-03 This 2-volume work

includes approximately 1,200 entries in A-Z order, critically reviewing the literature on specific topics from abortion to world systems theory. In addition, nine major entries cover each of the major disciplines (political economy; management and business; human geography; politics; sociology; law; psychology; organizational behavior) and the history and development of the social sciences in a broader sense.

## **Production, Value and Income Distribution**

Enrico Bellino 2021-12-30 This book investigates the relationship between wages, profits, values and labour employment from a classical-Keynesian perspective. The starting point of this approach is classical political economy (in particular, Smith, Ricardo and Marx), suitably reformulated in modern terms by Sraffa and then integrated with the Keynesian theory of employment. Such an approach proves to be more appropriate in understanding the complexities of current economies and in identifying the instruments to pursue the final goal of economic systems: putting each person in a position to earn what is necessary to live with dignity. The approach undertaken by these chapters is in contrast to the 'marginalist' or 'neoclassical' school, which constitutes the mainstream of economic analysis. Especially in recent decades, several critical analyses of the present state of economic research have emerged due to the failure of contemporary economic analysis to acutely penetrate and guide the workings of actual economic systems. But these analyses have not always been effectively presented in a coordinated manner. This work presents one possible unifying framework—grounded in a solid tradition of economic thought—which aims to describe the basic forces operating in capitalistic economies and to identify the main objectives to pursue in production economies in order to fully exploit their potential. Most importantly, the focus of such classical-Keyensian analysis concerns the production of goods and services, and this book shows how several factors typical of contemporary (post-)industrial societies thus can

be understood in a way that the standard economic theory has not been able to explicate (due to the reduction of everything to a question of exchange). The book provides key reading for those on master level economics courses. Moreover, it constitutes a solid introduction to modern classical-Keynesian analysis. It may also be of interest to readers who are keen to develop a critical view of economics, political economy and history of economic thought.

*Network Economics and the Allocation of Savings* Philipp Servatius 2011-10-20 This book provides a game theoretic model of interaction among VoIP telecommunications providers regarding their willingness to enter peering agreements with one another. The author shows that the incentive to peer is generally based on savings from otherwise payable long distance fees. At the same time, termination fees can have a countering and dominant effect, resulting in an environment in which VoIP firms decide against peering. Various scenarios of peering and rules for allocation of the savings are considered. The first part covers the relevant aspects of game theory and network theory, trying to give an overview of the concepts required in the subsequent application. The second part of the book introduces first a model of how the savings from peering can be calculated and then turns to the actual formation of peering relationships between VoIP firms. The conditions under which firms are willing to peer

are then described, considering the possible influence of a regulatory body.

Agency Theory Alexander Stremitzer 2005

Designing a contract is often more of an economic than a legal problem. A good contract protects parties against opportunistic behavior while providing motivation to cooperate. This is where economics and, especially contract theory, may prove helpful by enhancing our understanding of incentive issues. The purpose of this book is to provide specific tools which will help to write better contracts in real world environments. Concentrating on moral hazard literature, this book derives a tentative checklist for drafting contracts. As an economic contribution to a field traditionally considered an art rather than a science, this treatment also gives much attention to methodological issues. Government Regulation of the Employment Relationship Bruce E. Kaufman 1997 Comprises 18 chapters by different authors.

**Game Theoretic Problems in Network Economics and Mechanism Design**

**Solutions** Y. Narahari 2009-04-03 This monograph focuses on exploring game theoretic modeling and mechanism design for problem solving in Internet and network economics. For the first time, the main theoretical issues and applications of mechanism design are bound together in a single text.

**Firms' Objectives and Internal Organisation in a Global Economy** Luca Lambertini

2009-10-09 The interplay between firms' internal organization and market behaviour is a long standing issue in industrial economics. This book examines firms' objectives in the comparatively new perspective shaped by globalization. The positive and normative aspects of theoretical analysis are developed and richly complemented by empirical studies.

Credible Threats in Negotiations Wilko Bolt 2005-12-08 The game-theoretic modelling of negotiations has been an active research area for the past five decades, that started with the seminal work by Nobel laureate John Nash in the early 1950s. This book provides a survey of some of the major developments in the field of

strategic bargaining models with an emphasis on the role of threats in the negotiation process. Threats are all actions outside the negotiation room that negotiators have at their disposal and the use of these actions affect the bargaining position of all negotiators. Of course, each negotiator aims to strengthen his own position. Examples of threats are the announcement of a strike by a union in centralized wage bargaining, or a nation's announcement of a trade war directed against other nations in negotiations for trade liberalization. This book is organized on the basis of a simple guiding principle: The situation in which none of the parties involved in the negotiations has threats at its disposal is the natural benchmark for negotiations where the parties can make threats. Also on the technical level, negotiations with variable threats build on and extend the techniques applied in analyzing bargaining situations without threats. The first part of this book, containing chapter 3-6, presents the no-threat case, and the second part, containing chapter 7-10, extends the analysis for negotiation situations where threats are present. A consistent and unifying framework is provided first in 2.
