Psychological Foundations of Education Dr Prakash Chandra Pandey 2025-06-30 This first part of the book, Foundations of Educational Psychology, focuses on the essential principles of psychology as applied to educational contexts. It explores the fundamental concepts of general and educational psychology, including their history, nature, scope, and the relationship between psychology and education. The section also delves into the stages of human development, psychological methods of teaching, and key behavioral tendencies relevant to classroom practice. The aim of this book is to provide future educators, student-teachers, and education scholars with a comprehensive understanding of children's mental, physical, social, moral, conceptual, and language development. This knowledge equips educators to create inclusive, effective, and developmentally appropriate learning environments that foster the holistic growth of learners.

Psychological Foundations of Education Morris E. Eson 1964 This text has been written to serve the first course in educational psychology, to demonstrate to the student how the concepts and the ways of thinking of psychology apply to school and classroom practice and how they can contribute to an understanding of the accepted aims of education. This book attempts to bring to bear on the consideration of each educational problem that psychological point of view that promises to shed the greatest light. This selective application of the points of view of several schools of psychology, while perhaps lacking in theoretical consistency, promises greater functional effectiveness and less distortion of reality.

Historical Foundations of Educational Psychology John A. Glover 2013-11-11 This volume represents a beginning effort to compile a history of educational psychology The project began, innocuously enough, several years ago when we decided to add mon material about the history of educational psychology to the undergraduate course we were teaching. What seemed like a simple task became very complex as we searched in vain for a volume dealing with the topic. We ended up drawing on various histories of psychology that devoted anywhere from a few paragraphs to several pages to the topic and on a very few articles addressing the issue. We were startled, frankly, by the apparent lack of interest in the history of our field and decided to attempt to compile a history ourselves. As is the case with any edited volume, the contributing authors deserve credit for its positive features. They uniformly made every effort asked of them and taught us much about educational psychology. Any errors or omissions are our responsibility alone.

Psychological Foundations of Education Morris L. Bigge 1962 This book is designed for use as a basic text in courses in educational psychology, development, and learning, or as it is often entitled, psychological foundations of education. Instructors who wish to acquaint their students with a systematic development of cognitive-field psychology will find the book useful. A cognitive-field oriented psychologist uses field to mean the total psychological world in which a person lives at a given time. It includes psychological past, present, and future, also certain concrete or imaginative levels of psychological reality, all interpreted as simultaneous aspects of current situation. The authors feel that cognitive-field psychology has more to offer teachers than any other psychological framework, in that its systematized outlook provides more effective directives for classroom teachers than any other.

Psychological Foundations of Education presents some of the principles of psychology that are relevant to learning and teaching. It presents an alternative answer to the problem of the bifurcation of general and educational psychology in the curriculum of teacher preparation. While the solution is provisional and has obvious imperfections, it is offered in the hope that it may stimulate discussion of the problem and other solutions and/or explicit justifications for past practice. Key concepts discussed include teachers' attitudes and behavior, different types of learning, technology in education, forgetting and extinction, child development, and intelligence measurements. Also covered are the assessment of educational achievement, the social psychology of the classroom, and education in urban schools. This text should have a variety of uses in classes where students are preparing for teaching. It was written specifically for those situations in which the prospective teacher is introduced to psychology through a one- or two-semester integrated sequence.
