

Robot Framework Test Automation

Apr 30, 2025 · Robots are machines that can automatically perform both simple and complex actions. They are often programmed by a computer, but there's no single definition of a robot. Whatever their purpose, each robot will need a carefully thought-out set of sensors, actuators, and programs. While robots are becoming more advanced, it's important to understand their limitations. Each robot, regardless of its level of autonomy—meaning its ability to operate and make decisions without human supervision or intervention—consists of the same three components: mechanical ...
