Emergency Room Coding Ba Kobayashi
2010-07 Emergency Room Coding will prepare
you for the real world of coding in the
emergency department setting. The text
provides the beginning coder with a solid
foundation of how to code ER charts. We focus
on the diagnoses and procedures seen in the
majority of community-based hospitals. The
scenarios in this book are based on real life

experiences and will provide the coder with
situations s/he will most likely encounter in the
emergency room coding environment. The study
guide contains 32 emergency room records. The
case studies are representative of what is
commonly treated in most emergency rooms.
Each case study contains an ER report and an
answer worksheet. The ER record serves as a
good teaching tool for new coders because ER
records do not require as much clinical
background to code as inpatient records.
However, some of the injury cases may present a
challenge for new coders. Also, unlike most
coding textbooks, this study guide contains a
complete ER report with a full explanation, not
just thumbnail sketches. Therefore, Emergency
Room Coding is more realistic than the one-to-
two line diagnostic statements encountered in
most coding textbooks. Finally, the Answer Key
for the case studies contains a rationale for all
code assignments, as well as directions for
locating the correct diagnostic and procedure

codes. A multiple choice final review quiz is included at the end of this study guide as an opportunity for coders to test their coding skill set. Emergency Room Coding is updated annually to reflect the annual coding changes. Who is this book for? Coders needing to develop ER coding skills Students/Beginning coders trying to get their first job Anyone needing to understand ER code assignment Coding supervisors HIM Directors Auditors/Compliance Officers Case Managers What's Inside? 32 Case Studies Dictated ER Reports Answer Key Rationale Instructions on how to locate codes in ICD-9 Coding Book Final Exam Linda Kobayashi, BA, RHIT, CCS, has been a coder and coding manager for almost 20 years. Since 1998, Ms. Kobayashi has owned and operated Codebusters, Inc., a nationwide coding consulting company. Widely regarded as a medical coding and auditing expert, she has conducted workshops on a variety of coding topics, including CCS Exam preparation workshops. Throughout her

career the author has remained professionally active, as an AHIMA member as well as a member of her state association, CHIA (California Health Information Association). Her formal training includes a teaching credential from California State University Los Angeles, a B.A. degree in English Literature from University of California Los Angeles, an RHIT from AHIMA after completing the RHIT program at East Los Angeles College, and a CCS certificate from AHIMA. Extensive experience as a hands-on coder, auditor and educator, and has given the author the expertise to help coders prepare for the professional coding environment. **Medical-surgical Nursing** Sharon Mantik Lewis 2007 The bestselling Medical-Surgical Nursing, 7th Edition provides a well-rounded and comprehensive approach to nursing care. Critical Care Nursing Patricia Gonce Morton 1998 This book is organized into five parts, the first two of which cover areas applicable to all critical care patients, including the patient's and family's experience, education, pain management, ethical and legal issues, and the rewards and challenges of critical care nursing. The third part addresses specific populations, including pediatric patients, pregnant women, older adults, and postanesthesia patients, as well as interfacility transport. The balance of the book is arranged by body systems and concludes with multisystem problems. This is the seventh edition of a text first published in 1973 and last published in 1994. The purpose is to present current, comprehensive, and practical information built on a holistic perspective of care in which the patient is the core of nursing

practice. This book meets a need for educating students and nurses in the critical care environment. The editors' objective of providing a framework for focusing on patient responses in the critical care environment is met. This book is intended for students in critical care, educators, and clinicians. This edition is also tailored to meet the needs of patients. The editors are excellent authorities in critical care nursing. All three are practitioners, and one is both practitioner and educator. The contributors and reviewers are critical care experts. The illustrations are used best to understand critical care technology. The graphics used for anatomy, physiology, and patient assessment add to the usefulness of the text. The references are pertinent and current, but certain specialty content would need to be updated by the reader (e.g., medication protocols for CHF). The use of color in the text is managed carefully to guide and not overpower the reader. The 1997 ACLS Guidelines are in Appendix 1. The Answer Key to

Section 39 1 The Endocrine System Answer Key

Study Questions appears in Appendix 2. Anatomy and physiology, patient assessment and clinical management, nursing research, collaborative plans of care, teaching, and home care issues are some of the innovations presented. One strength of book is how it addresses the changes associated with aging and the needs of the older adult. Aging concerns are covered in one chapter and are highlighted throughout the text. This edition provides current information that makes the previous edition out of date. I would recommend this text for beginning critical care nurses and for undergraduate nursing students for its coverage of advanced pathophysiological concepts.
