*Software Education Conference (SRIG-ET '94)*  
Martin Purvis 1995

**Global Contexts** Deborah S. Bosley 2001 A dozen case studies, some fiction some real, for use in a graduate or undergraduate technical communication course. They reveal issues relevant at the international level, offer strategies for recognizing behaviors and patterns of thinking and feeling that affect technical documentation, and identify

**Writing in the Health Professions** Barbara Hefferon 2005 Practical, applied, and up-to-the-minute, *Writing for the Health Professions* teaches students, healthcare professionals, and professional writers the essential skills in medical and health communications. Drawing on her extensive experience as a nurse, cardio-

pulmonary technician, medical writer, and writing teacher, Barbara Hefferon addresses the communications requirements of the healthcare professions and those who write in these high-tech fields. This comprehensive text covers writing situations and documents common in hospitals, clinics, HMOs, health insurance companies, public health campaigns, and other healthcare environments. Special attention is given to visual and electronic forms of communication, including Web sites and multimedia productions.

**Writing Software Documentation: A Task-Oriented Approach, 2/E** Barker 2003-09  
*Systems Analysis and Design with UML Version 2.0* Alan Dennis 2005 A modern, hands-on approach to doing SAD--in UML! Get the core skills you need to actually do systems analysis

and design with this highly practical, hands-on approach to SAD using UML! Authors Alan Dennis, Barbara Haley Wixom, and David Tegarden guide you through each part of the SAD process, with clear explanations of what it is and how to implement it, along with detailed examples and exercises that allow you to practice what you've learned. Now updated to include UML Version 2.0 and revised, this Second Edition features a new chapter on the Unified Process, increased coverage of project management, and more examples. Highlights

**Written in UML:** The text takes a contemporary, object-oriented approach using UML. Focus on doing SAD: After presenting the how and what of each major technique, the text guides you through practice problems and then invites you to use the technique in a project. Rich examples of both success and failure: Concepts in Action boxes describe how real companies succeeded and failed in performing the activities in the chapters. Project approach: Each chapter

focuses on a different step in the Systems Development Life Cycle (SDLC) process. Topics are presented in the order in which they are encountered in a typical project. A running case: This case threaded throughout the text allows you to apply each concept you have learned.

**American Book Publishing Record 2003**

[Technical Marketing Communication](#) Sandra W.

Harner 2002 This book provides the necessary preparation for the breakneck speed of technical marketing communications in today's Internet economy. A progressive approach first explains the role and responsibility of marketing communication in a technology-filled world. Then, on that foundation, the book progressively introduces the concepts of needs analysis, audience analysis, strategy development, media choices, tactics, and continuous evaluation. A first person scenario opens each chapter, giving readers a glimpse of real-world experiences as told by professionals in the field. A "Summing it Up" section at the end of every chapter provides a quick reference guide to the most important material covered in the chapter. An "Applying What You've Learned" section at the end of every chapter includes exercises and discussion starters. For those interested in expanding their skills in technical marketing communication.

Technical Writing Style Dan Richard Jones 1998  
Advanced technical communication books are

becoming more and more available. However, each book is solely devoted to a specialized topic such as technical editing, design, illustration, usability testing, and online documentation. Despite all of these introductory and advanced books, not one is available specifically devoted to the challenges of style in technical communication. KEY TOPICS: This 12-point approach offers the most current and comprehensive instruction available in achieving an effective style in technical documents. It shows that technical prose style varies from the highly formal to the colloquial, from the pretentious to the plain, and it demonstrates the many stylistic strategies writers should consider for every technical document they write. Anyone who has to write professional and technical documents, specifically, engineers, software developers/consultants, medical writers, professional technical writers. Part of the Allyn & Bacon Series in Technical communication.

Oral Presentations for Technical Communication

Laura J. Gurak 2000 *Oral Presentations for Technical Communication* provides what most technical communication books lack: clear, accessible instruction on speaking. This book helps professionals master public speaking in a technical or scientific environment, whether it be through traditional presentations with whiteboards and flipcharts or presentations with computer software such as PowerPoint. Unlike most general speech texts, which include examples from various disciplines, *Oral Presentations* uses specific examples from the fields of science and technology and shows how skilled technical communicators make complex information accessible to non-technical audiences. The first three parts of the book focus on basic skills and concepts, including four basic types of presentations relevant to technical communication. The last two parts introduce more advanced topics, such as legal, privacy, and censorship issues, and the changing nature of presentations in the digital age. *Oral*

*Presentations* thus brings together the best, most current instruction from three fields: technical communication/rhetoric, speech communication, and computer and information technology. For professionals in public speaking, oral presentations, and technical communication.

*Guide to the Software Engineering Body of Knowledge* Alain Abran 2001  
*CCCC Bibliography of Composition and Rhetoric, 1991* Gail E. Hawisher 1993 The CCCC Bibliography of Composition and Rhetoric, published for the Conference on College Composition and Communication, offers teachers and researchers an annual classified listing of scholarship on written English and its teaching at the college level. The 1991 volume lists and annotates 1,925 articles, books, dissertations, and papers that, with few exceptions, were published during the 1991 calendar year. A group of 171 contributing bibliographers prepared the citations and

annotations for the entries appearing in this volume. The CCCC Bibliography includes an index of authors and editors, a subject index, and entries cross-referenced according to subject matter. Considerably more comprehensive than other bibliographies in composition studies, the CCCC Bibliography of Composition and Rhetoric draws upon a large group of experts in the field to aid teachers and researchers in sorting through a vast body of interdisciplinary material, making their work easier and more effective. Annotations accompany all entries in this volume. They describe a publication's contents and are intended to help users determine its usefulness. Annotations are brief and, insofar as the English language allows, are meant to be descriptive, not evaluative—they explain what an entry is about while leaving readers free to judge for themselves the work's merits. Most annotations serve one of three functions: they present the document's thesis, main argument, or major

research finding; they describe the work's major organizational divisions; or they indicate the purpose or scope of the work. The subject index lists most of the topics discussed in the works cited in this volume. Consulting the Subject Index will help users locate sections and subsections containing large numbers of entries addressing the same topic. Each document is cited and annotated only once under one of the five major sections of the CCCC Bibliography. Each entry, however, receives an "entry number" so that cross-references to other sections are possible. This feature is especially useful because much scholarship in composition and rhetoric is interdisciplinary in nature. Cross-references appear as a listing of entry numbers, preceded by "See also," found at the end of each subsection. Entries appear under five major categories: bibliographies and checklists; theory and research; teacher education, administration, and social roles; curriculum; and testing, measurement, and evaluation. Although the

CCCC Bibliography excludes master's theses, textbooks, computer software, and book reviews from its coverage, it furnishes citations to review essays, articles appearing in some 220 journals, scholarly monographs and essay collections, dissertations abstracted in Dissertation Abstracts International, and selected documents and conference materials available through ERIC.

*Perspectives on Software Documentation*

Thomas T. Barker 1991 Designed to address the randomness of the literature on software documentation. This book contains a variety of perspectives, tied together by the need to make software products more usable.

*Writing a Professional Life* Gerald J. Savage 2001 This is the first collection of narratives by practicing technical communicators telling their own personal stories about the workplace and their lives on the job. The authors portray a wide range of jobs: writers, editors, interface designers, marketing writers, and trainers

working in 9 different technical fields, including software, R&D, engineering, medicine, transportation, and telecommunications. The stories vividly demonstrate the unique power of narrative as a teaching and learning tool. Unlike fabricated cases, these real-life narratives show new and veteran technical writers at work on the job, dealing with tasks, clients, and co-workers, and revealing their insights, values, and attitudes about their work. The stories also show the skills required in the profession and the ethical and other issues raised in the course of the workday. For anyone interested in technical communication and professional writing.

**Principles of Web Design** David K. Farkas 2002 This is a conceptually rich book that teaches web design skills and offers practical guidance within a coherent framework of information-design principles and hypertext theory. With a very clear yet trim writing style and over 150 illustrations, this book offers a

broad range of discussion items. An emphasis on intellectually challenging questions call for review and synthesis, problem solving, and the focused examination of Websites. A set of 30 "Quick Start" design principles enables readers to begin working on a project. Explanation of copyright issues include public domain content, fair use, and related issues. Emphasis on usability testing and other forms of evaluation teach the importance of involving users in the design process and help plan and conduct basic usability tests. For those interested in multimedia and web design.

**Writing Software Documentation** Thomas T. Barker 1998-03

**Technical Editing** Carolyn D. Rude 1998 A textbook for a graduate or undergraduate course presenting not lists of rules but principles and strategies of grammar, punctuation, style, organization, and visual design of technical information. Revised from the 1991 edition to incorporate changes on the technology and the

*Journal of Applied Fire Science* 1993

**Systems Analysis and Design** Alan Dennis 2014-11-11 The 6th Edition of Systems Analysis and Design continues to offer a hands-on approach to SAD while focusing on the core set of skills that all analysts must possess. Building on their experience as professional systems analysts and award-winning teachers, authors Dennis, Wixom, and Roth capture the experience of developing and analyzing systems in a way that students can understand and apply. With Systems Analysis and Design, 6th Edition, students will leave the course with experience that is a rich foundation for further work as a systems analyst.

Usability Testing and Research Carol M. Barnum 2002 Built on a solid foundation of current research in the field, Usability Testing and Research provides a comprehensive, up-to-date perspective in this increasingly important area of technical communication. Based on the most

current research in the field, this book reflects the most recent developments and studies on this topic available. Sidebars throughout the book catch the attention of the readers and highlight key concepts in the text. A chapter on web testing provides coverage of what is now the hottest area in usability testing. End of chapter discussions and exercises reinforce learning. Frequent examples of planning, conducting, and reporting usability tests present current samples of projects. An appendix on teamwork gives pertinent advice in an area neglected by other texts: building and coordinating cross-functional teams for usability testing. For those interested in usability testing and research.
