Classification of Instructional Programs, Canada, 2000 John S. Crysdale 2005 The Classification of Instructional Programs (CIP) is used for classifying instructional programs according to field of study. CIP was originally created by the National Center for Education Statistics (NCES) in the United States. It is a hierarchical classification. CIP Canada 2000 is the adaptation of this classification for use in Canada. It comprises 6 chapters, 49 2-digit series, 385 4-digit subseries and 1,432 6-digit instructional program classes. The classification manual provides a detailed description of each instructional program class together with illustrative examples of the types of instructional programs found in that class. Illustrative examples are also provided of closely related programs that are classified elsewhere. In addition, the manual includes an introduction to CIP, various look-up tables, and an alternative structure for the aggregation of field of study data. CIP has a ten-year revision cycle.

2007 Mississippi Curriculum Framework Eris Dowds 2007 Secondary vocational-technical education programs in Mississippi are faced with many challenges resulting from sweeping educational reforms at the national and state levels. Schools and teachers are increasingly being held accountable for providing true learning activities to every student in the classroom. This accountability is measured through increased requirements for mastery and attainment of competency as documented through both formative and summative assessments. The courses in this document reflect the statutory requirements as found in Section 37-3-49, Mississippi Code of 1972, as amended (Section 37-3-46). In addition, this curriculum reflects guidelines imposed by federal and state mandates (Laws, 1988, ch. 487, Section 14; Laws, 1991, ch. 423, Section 1; Laws, 1992, ch. 519, Section 4 effective from and after July 1, 1992; Carl D. Perkins Vocational Education Act III, 1998; and No Child Left Behind Act of 2001). Automotive Collision Repair Technology I is an instructional program that orients an individual to the field of automotive collision repair. Automotive Collision Repair Technology II is a continuation of Automotive Collision Repair Technology I and allows an individual to prepare for employment or continued education in the occupation of automotive collision repair. Each course must be taught in a minimum two class period block. The first course in the program includes instruction in the foundation skills related to safety, tools and equipment usage measurement, basic automotive collision repair, non-structural and structural analysis and damage repair, mechanical and electrical, and painting and refinishing. The second course in the program provides students with advanced skills related to non-structural and structural analysis and damage repair, mechanical and electrical, and painting and refinishing. Appended are: (1) ASE/NATEF 2006 Collision Repair and Refinishing Standards; (2) Academic Standards; (3) 21st Century Skills; and (4) Rubrics and Resources. (Contains 6 footnotes.)

The Vo-Tech Track to Success in Manufacturing, Mechanics, and Automotive Care Joe Craig 2014-07-15 Many students are coming to realize that traditional four-year colleges do not necessarily lead to gainful employment after graduation and, therefore, do not always make good financial sense. Vocational and technical education, on the other hand, provides practical skills training, real-world experience, professional certification and contacts, and a direct pathway to jobs and careers. Readers are introduced to the exciting and enriching learning opportunities afforded by vo-tech and CTE programs at the high school and postsecondary levels in manufacturing, mechanics, and automotive care. Areas of specialization, certifications, job descriptions, career pathways, resume and interviewing skills, and career-building

techniques and strategies are all emphasized.
