Technological Innovation, Supply Chain Trade, and Workers in a Globalized World David Dollar 2019 This report takes stock of the evolution of global value chains (GVCs) in light of technological developments, such as robotics, big data and the Internet of Things. It discusses how these technologies are reshaping GVCs and examines the effect of these changes on labor markets in developed and developing economies and on supply chain management. The report discusses how technological developments are creating new opportunities for the participation of small and medium-sized enterprises in global value chains and reviews issues related to GVC measurement. The report is a follow-up to the first Global Value Chain Development Report,

which revealed the changing nature of international trade when analyzed in terms of value chains and value-added trade.[Resumen de editor]
