Environmental Economics: The Essentials

Tom Tietenberg 2019-08-01 Environmental Economics: The Essentials offers a policy-oriented approach to the increasingly influential field of environmental economics that is based upon a solid foundation of economic theory and empirical research. Students will not only leave the course with a firm understanding of environmental economics, but they will also be exposed to a number of case studies showing how underlying economic principles provided the foundation for specific environmental and resource policies. This key text highlights what insights can be derived from the actual

experience. Key features include: Extensive coverage of the major issues including climate change, air and water pollution, sustainable development, and environmental justice; Introductions to the theory and method of environmental economics including externalities, experimental and behavioral economics, benefit-cost analysis, and methods for valuing the services provided by the environment; Boxed 'Examples' and 'Debates' throughout the text which highlight global examples and major talking points. The text is fully supported with end-of-chapter summaries, discussion questions, and self-test exercises in the book, as well as with multiple-choice questions, simulations, references, slides, and an instructor's manual on the Companion Website. This text is adapted from the best-selling Environmental and Natural

Resource Economics, 11th edition, by the same authors.

The Economics of the Environment Peter Berck 2011 For undergraduate students with a background in either economics or environmental sciences. Gain a deeper understanding of economics and the environment. The Economics of the Environment completely integrates economics and environmental issues, explaining how both market successes and failures affect the environment. This text also shows students how to measure the value of environmental goods, the use of these measurements in weighing environmental costs against the benefits of economic activity, and the implementation of policies to correct market failures.

Bioenergy and Land Use Change Zhangcai Qin 2017-12-11 Although bioenergy is a renewable energy source, it is not without impact on the environment. Both the cultivation of crops specifically for use as biofuels and the use of

agricultural byproducts to generate energy changes the landscape, affects ecosystems, and impacts the climate. Bioenergy and Land Use Change focuses on regional and global assessments of land use change related to bioenergy and the environmental impacts. This interdisciplinary volume provides both high level reviews and in-depth analyses on specific topics. Volume highlights include: Land use change concepts, economics, and modeling Relationships between bioenergy and land use change Impacts on soil carbon, soil health, water quality, and the hydrologic cycle Impacts on natural capital and ecosystem services Effects of bioenergy on direct and indirect greenhouse gas emissions Biogeochemical and biogeophysical climate regulation Uncertainties and challenges associated with land use change quantification and environmental impact assessments Bioenergy and Land Use Change is a valuable resource for professionals, researchers, and graduate students from a wide variety of fields

including energy, economics, ecology, geography, agricultural science, geoscience, and environmental science. Read an interview with the editors to find out more:

Forest Tenure Reform in Asia and Africa

Randall Bluffstone 2014-11-13 Forest tenure reforms are occurring in many developing countries around the world. These reforms typically include devolution of forest lands to local people and communities, which has attracted a great deal of attention and interest. While the nature and level of devolution vary by country, all have potentially important implications for resource allocation, local

ecosystem services, livelihoods and climate change. This book helps students, researchers and professionals to understand the importance and implications of these reforms for local environmental quality, climate change, and the livelihoods of villagers, who are often poor. It is shown that local forest management can often be more successful than top-down management of common pool forest resources. The relationship of local forest tenure reform to the important climate change initiative REDD+ is also considered. The work includes a number of generic chapters and also detailed case studies from China, Ethiopia, Kenya, Nepal, Tanzania and Uganda. Using specific examples and a wide variety of disciplinary perspectives, including quantitative and qualitative analytical methods, the book provides an authoritative and critical picture of local forest reforms in light of the key challenges humanity faces today.

Systemic Crises of Global Climate Change

Phoebe Godfrey 2016-04-14 Sociological

literature tends to view the social categories of race, class and gender as distinct and has avoided discussing how multiple intersections inform and contribute to experiences of injustice and inequity. This limited focus is clearly inadequate. Systemic Crises of Global Climate Change is an edited volume of 49 international, interdisciplinary contributions addressing global climate change (GCC) by intentionally engaging with the issues of race, gender, and class through an intersectional lens. The volume challenges and inspires readers to foster new theoretical and practical linkages and think beyond the traditional, and oftentimes reductionist, environmental science frame by examining issues within their turbulent political, cultural, and personal landscapes. Varied media and writing styles invite students and educators to reflexively engage different, yet complementary, approaches to GCC analysis and interpretation, mirroring the disparate voices and viewpoints within the field. The second

volume, Emergent Possibilities for Sustainability will take a similar approach but will examine the possibilities for solutions, as in the quest for global sustainability. This book is a valuable resource for academics, researchers and both undergraduate and post-graduate students in the areas of Environmental Studies, Climate Change, Gender Studies and International studies as well as those seeking a more intersectional analysis of GCC.

[Recent Accomplishments in Applied Forest Economics Research](#) F. Helles 2013-03-14 The papers in this book were 'in a preliminary version' presented at an international conference May 21-25, 2002 in Gilleleje, Denmark. It was a joint event, namely the biennial meeting of the Scandinavian Society of Forest Economics and the 3rd Berkeley-KVL Conference. The Scandinavian Society of Forest Economics (SSFE) was established in 1958 as a forum for

forest economists in the Nordic countries to meet and exchange ideas on research and education. Alternating between Denmark, Finland, Norway and Sweden, biennial ordinary meetings have taken place ever since. The number of participants has increased from 10-15 in the first decade to more than 80 in 2002. In the last two decades prominent researchers from outside Scandinavia have been invited to present papers at the biennial meetings and also to participate in ad hoc working groups. The Berkeley-KVL part of the conference is based on a research collaboration between The Royal Veterinary and Agricultural University (KVL), Copenhagen, University of California at Berkeley, and Oregon State University. It was initiated in 1993 within the frame work of a research programme at KVL: 'Stochastic Decision Analysis in Forest Management' and since 1996 extended to the programme 'Economic Optimisation of Multiple-Use Forestry and Other Natural Resources'.

Microeconomic Analysis of Land Management

Second Growth Sean Markey 2007-10-01 This book is drawn from a three-year participatory research project with four communities in British Columbia: two municipalities and two Aboriginal communities. It examines historical and contemporary forces of restructuring, linking the development of rural communities with the legacy of resource development and Aboriginal marginalization across the province. The book then presents the theoretical and practical dynamics of the community economic development (CED) process and outlines a variety of strategies communities can initiate to diversify their local economies. Second Growth shows that sound theoretical frameworks and tested best practices are important tools in facilitating the prospects for a second growth in rural and small-town communities.

Planning Law and Environmental Limits Naomi Luhde-Thompson 2026-03-23 This book explores the role of planning law in balancing the dilemma of resource extraction with the recognition of greenhouse gas emission limits. Naomi Luhde-Thompson explores how planning law, which is one of the strongest forms of environmental regulation in the UK, has failed to incorporate environmental limits into decisions. Environmental limits are broadly understood as the point at which an irreversible change occurs in a system, providing a measure by which to assess development and to test whether or not these limits might be overrun. Combining theoretical perspectives with experiential practice, the book draws upon hydrocarbon extraction to analyse and interrogate the functionality of current decision-making processes related to planning law and climate change mitigation. It goes on to propose an

amended system that expands the foundational value of public interest in planning law, recommending strategies to incorporate environmental limits, in both strategic planning and decisions. *Planning Law and Environmental Limits* will be of use to lawyers and policymakers, as well as to researchers, academics, and students interested in climate change, planning, and environmental law.
