of this volume contain the papers on informal logic and argumentation that I've published and/or read at conferences over the last 17 years. These papers are reproduced here pretty much unchanged from their first appearance; it is my intention that their appearance here constitute a record of my positions and arguments at the time of their original publication or delivery. I've made minor changes in format, in the style of references, etc., for the sake of consistency; I've also corrected typographical errors and the like. The only extensive changes in wording occur in the last few pages of Chapter 7, and were made only to enable the reader to see more clearly what I was getting at in my first attempt to write about the notion of coherence. Chapter 13 was written expressly for this volume. It looks retrospectively at the contents of the first 12 chapters and attempts to highlight the unifying themes that run through them. It also revisits the ideas about dialectic that occupied my first in light of later developments in my thinking but also re paper, reworking them emphasizing themes about which I've tended to remain silent in the last few years.

Crucial Concepts in Argumentation Theory F. H. van Eemeren 2001

Crucial Concepts in Argumentation Theory is a collection of essays that discuss a series of important issues in the study of argumentation. The essays describe the concepts that are crucial to argumentational research and the various ways these concepts have been approached. The essays explore such issues as points of view, unexpressed premises, argument schemes, argumentation structures, fallacies, argument interpretation and reconstruction, and argumentation in law. Each of the essays provides interested readers with an overview of the literature that can serve as a point of departure for further study.

**The Structure of Argument** Annette T. Rottenberg 2014-10-10 The Structure of Argument covers critical thinking, reading, writing, and research. Concise but thorough, it includes questions, exercises, writing assignments, and a full semester's worth of readings—everything students need in an affordable, compact format. Presenting Aristotelian and Rogerian as well as Toulmin argument, The Structure of Argument has been totally revised, with more than three-quarters of the readings new (including many multimodal selections available online at no extra charge), new coverage of multimodal argument, expanded treatment of key rhetorical concepts, a fresh new design, and additional support for research. Its emphasis on Toulmin argument makes Structure highly teachable, since the approach fits with the goals of the composition course.

**Fundamentals of Argumentation Theory** Frans H. van Eemeren  
2013-11-05 Argumentation theory is a distinctly multidisciplinary field of inquiry. It draws its data, assumptions, and methods from disciplines as disparate as formal logic and discourse analysis, linguistics and forensic science, philosophy and psychology, political science and education, sociology and law, and rhetoric and artificial intelligence. This presents the growing group of interested scholars and students with a problem of access, since it is even for those active in the field not common to have acquired a familiarity with relevant aspects of each discipline that enters into this multidisciplinary matrix. This book offers its readers a unique comprehensive survey of the various theoretical contributions which have been made to the study of argumentation. It discusses the historical works that provide the background to the field and all major approaches and trends in contemporary research. Argument has been the subject of systematic inquiry for twenty-five hundred years. It has been graced with theories, such as formal logic or the legal theory of evidence, that have acquired a more or less settled provenance with regard to specific issues. But there has been nothing to date that qualifies as a unified general theory of argumentation, in all its richness and complexity. This being so, the argumentation theorist must have access to materials and methods that lie beyond his or her "home" subject. It is precisely on this account that this volume is offered to all the constituent research communities and their students. Apart from the historical sections, each chapter provides an economical introduction to the problems and methods that characterize a given part of the contemporary research program. Because the chapters are self-contained, they can be consulted in the order of a reader's interests or research requirements. But there is value in reading the work in its entirety. Jointly authored by the very people whose research has done much to define the current state of argumentation theory and to point the way toward more general and unified future treatments, this book is an impressively authoritative contribution to the field.

**Arguments and Arguing** Thomas A. Hollihan 1998-08 This text

embraces the narrative or storytelling approach to the study of argumentation.
