Qualitative Research in STEM Sherry Marx 2016-07-01 Qualitative Research in STEM examines the groundbreaking potential of qualitative research methods to address issues of social justice, equity, and sustainability in STEM. A collection of empirical studies conducted by prominent STEM researchers, this book examines the experiences and challenges faced by traditionally marginalized groups in STEM, most notably culturally and linguistically diverse students and women. Investigations into these issues, as well as the high dropout rate among engineering students and issues of academic integrity in STEM, come with detailed explanations of the study methodologies used in each case. Contributors also provide personal narratives that share their perspectives on the benefits of qualitative research methodologies for the topics explored. Through a variety of qualitative methodologies, including participatory action research, Indigenous research, and critical ethnography, this volume aims to reveal and remedy the inequalities within STEM education today.

Student Reasoning in Organic Chemistry Nicole Graulich 2022-12-21

Reasoning about structure-reactivity and chemical processes is a key competence in chemistry. Especially in organic chemistry, students experience difficulty appropriately interpreting organic representations and reasoning about the underlying causality of organic mechanisms. As organic chemistry is often a bottleneck for students' success in their career, compiling and distilling the insights from recent research in the field will help inform future instruction and the empowerment of chemistry students worldwide. This book brings together leading research groups to highlight recent advances in chemistry education research with a focus on the characterization of students' reasoning and their representational competencies, as well as the impact of instructional and assessment practices in organic chemistry. Written by leaders in the field, this title is ideal for chemistry education researchers, instructors and practitioners, and graduate students in chemistry education.
