*Student Reasoning in Organic Chemistry* Nicole  
Graulich 2022-12-21 Reasoning about structure-  
reactivity and chemical processes is a key  
competence in chemistry. Especially in organic  
chemistry, students experience difficulty  
appropriately interpreting organic  
representations and reasoning about the  
underlying causality of organic mechanisms. As  
organic chemistry is often a bottleneck for  
students' success in their career, compiling and  
distilling the insights from recent research in the  
field will help inform future instruction and the  
empowerment of chemistry students worldwide.  
This book brings together leading research  
groups to highlight recent advances in chemistry  
education research with a focus on the  
characterization of students' reasoning and their  
representational competencies, as well as the  
impact of instructional and assessment practices  
in organic chemistry. Written by leaders in the  
field, this title is ideal for chemistry education  
researchers, instructors and practitioners, and  
graduate students in chemistry education.

**Teaching Computing** Henry M. Walker  
2018-04-24 Teaching can be intimidating for  
beginning faculty. Some graduate schools and  
some computing faculty provide guidance and  
mentoring, but many do not. Often, a new  
faculty member is assigned to teach a course,  
with little guidance, input, or feedback.  
*Teaching Computing: A Practitioner's  
Perspective* addresses such challenges by

extensive teaching experience and his teaching-  
oriented columns that span 20 years, and  
informed by computing-education research, the  
book provides numerous elements that are  
designed to connect with teaching practitioners,  
including: A wide range of teaching topics and  
basic elements of teaching, including tips and  
techniques Practical tone; the book serves as a  
down-to-earth practitioners' guide Short,  
focused chapters Coherent and convenient  
organization Mix of general educational  
perspectives and computing-specific elements

examines the groundbreaking potential of  
qualitative research methods to address issues  
of social justice, equity, and sustainability in  
STEM. A collection of empirical studies  
conducted by prominent STEM researchers, this  
book examines the experiences and challenges

faced by traditionally marginalized groups in STEM, most notably culturally and linguistically diverse students and women. Investigations into these issues, as well as the high dropout rate among engineering students and issues of academic integrity in STEM, come with detailed explanations of the study methodologies used in each case. Contributors also provide personal narratives that share their perspectives on the benefits of qualitative research methodologies for the topics explored. Through a variety of qualitative methodologies, including participatory action research, Indigenous research, and critical ethnography, this volume aims to reveal and remedy the inequalities within STEM education today.
