Student Reasoning in Organic Chemistry Nicole Graulich 2022-12-21 Reasoning about structure-reactivity and chemical processes is a key competence in chemistry.

Especially in organic

chemistry, students experience difficulty appropriately interpreting organic representations and reasoning about the underlying causality of organic mechanisms. As organic chemistry is often a bottleneck for students' success in their career, compiling and distilling the insights from recent research in the field will help inform future instruction and the empowerment of chemistry students worldwide. This book brings together leading research groups to highlight recent advances in chemistry education research with a focus on the characterization of students' reasoning and their representational competencies, as well as the impact of instructional and assessment practices in organic chemistry. Written by leaders in the field, this title is ideal for chemistry education researchers, instructors and practitioners, and graduate students in

chemistry education.

Qualitative Research in STEM
examines the groundbreaking
potential of qualitative
research methods to address
issues of social justice, equity,
and sustainability in STEM. A
collection of empirical studies
conducted by prominent STEM
researchers, this book
examines the experiences and

challenges faced by
traditionally marginalized
groups in STEM, most notably
culturally and linguistically
diverse students and women.
Investigations into these
issues, as well as the high
dropout rate among
engineering students and
issues of academic integrity in
STEM, come with detailed
explanations of the study
methodologies used in each
case. Contributors also provide
personal narratives that share
their perspectives on the
benefits of qualitative research
methodologies for the topics
explored. Through a variety of
qualitative methodologies,
including participatory action
research, Indigenous research,
and critical ethnography, this
volume aims to reveal and
