Aging of the Organs and Systems Richard Aspinall 2013-06-29 During the last 40 years, the study of the biological basis of aging has progressed tremendously, and it has now become an independent and respectable field of study and research. This volume on "Aging of Organs and Systems", is an attempt to bring understanding to both the aging process and the disease processes of old age. Bringing together contributions from an international team of authors, it will be of interest to graduates and postgraduates in the fields of medicine and nursing, researchers of different aspects of biogerontology and those in the pharmaceutical, cosmeceutical, nutraceutical and health-care industry.

Giddens's Concepts for Canadian Nursing Practice - E-Book Debra (Debbie) Sheppard-LeMoine 2025-09-25 Learn the core concepts of Canadian nursing care and how to apply them to the clinical setting! Giddens's Concepts for Canadian Nursing Practice uses a simplified, intuitive approach to describe 64 important concepts relating to all areas of nursing practice in a Canadian health care context, including Indigenous health, racism, and gender diversity. Integrating the latest Canadian statistics, research, and cultural considerations, this text emphasizes cultural safety, interprofessional collaboration, and health equity. To reinforce understanding, this book also makes connections among related concepts and links you to other Elsevier nursing textbooks. Exemplars for each concept provide useful examples and models, showing how concepts are successfully applied to practice. Essential tools and case studies for clinical reasoning in nursing help you confidently prepare for almost any clinical nursing situation.

Modulating Aging and Longevity S.I. Rattan 2003-09-30 After decades of systematic collection of data describing age-related changes in organisms, organs, tissues, cells and macromolecules, biogerontologists are now in a position to construct general principles of ageing and explore various possibilities of intervention using rational approaches. While not giving serious consideration to the claims made by charlatans, it cannot be ignored that several researchers are making genuine attempts to test and develop various means of intervention for the prevention and treatment of age-related diseases, for regaining the functional abilities and for prolonging the lifespan of experimental organisms. This book provides the most up-to-date information and a critical evaluation of a variety of approaches being tried for modulating aging and longevity, including dietary supplementation with antioxidants, vitamins and hormones, genetic engineering, life-style alterations, and hormesis through mild stress. The goal of research on ageing is not to increase human longevity regardless of the consequences, but to increase active longevity free from disability and functional dependence.

Concepts for Nursing Practice E-Book Jean Foret Giddens 2019-11-22 Learn the core concepts of nursing care and apply them to the clinical setting! Concepts for Nursing Practice, 3rd Edition uses a simplified, intuitive approach to describe 57 important concepts relating to all areas of nursing practice. For easier understanding, this book also makes connections among related concepts and links you to other nursing textbooks. Exemplars for each concept provide useful examples and models, showing how concepts are successfully applied to practice. New to this edition are updated research evidence and a new Population Health concept. Written by conceptual learning expert Jean Giddens, this text will help you build clinical reasoning skills and prepare confidently for almost any clinical nursing situation. - Authoritative content written by expert contributors and meticulously edited by concept-based learning expert Jean Giddens sets the standard for the rapidly growing concept-based curriculum movement. - A total of 57 important nursing concepts are clearly defined and analyzed, spanning the areas of patient physiology, patient behavior, and the professional nursing environment. - Case studies in each chapter make it easier to apply knowledge of nursing concepts to real-world situations. - UNIQUE! Featured Exemplars sections describe selected exemplars related to each nursing concept, covering the entire lifespan and all clinical settings, and help you assimilate concepts into practice. - UNIQUE! Logical framework of concepts by units and themes helps you form immediate connections among related concepts --- a key to conceptual learning. - UNIQUE!

Interrelated Concepts illustrations provide visual cues to understanding and help you make connections across concepts. - NEW! UPDATED content reflects the latest research evidence and national and international practice guidelines. - NEW! Population Health concept reflects the future of nursing, in which health care organizations learn to deliver care that is high in quality, patient-centered, cost-effective, and evidence-based. - NEW! Featured Exemplars sections provide a brief explanation of some of the most important exemplars. - NEW! Discussion questions in case studies reinforce your understanding of each concept. - NEW! UPDATED exemplar links connect you to concept exemplars in other RN- and LPN/LVN-level Elsevier nursing titles.

Times, Cells, and Aging Bernard Strihler 1977-01-28 Time, Cells, and Aging, 2nd Edition presents the mechanics of cell function and the relevant implications of the molecular-genetic view to the aging phenomena. This book explores the biology of the aging process. Comprised of 11 chapters, this edition starts with an overview of the causes and mechanisms underlying the gradual deterioration of structure and function characteristics of aging. This text then examines the two aspects of the behavior of man, including the reasoned conscious behavior and the greater dependence on reaction patterns predicted on the successful responses of the past. Other chapters explore the relationship between aging and mortality rate in animals, which is a result of an organism's decreasing ability to function optimally in carrying out his vital functions. The final chapter deals with the implementation of a research plan relevant to understanding the primary mechanisms of the aging process. This book is a valuable resource for gerontologists, biologists, and molecular biologists.

Therapeutic Exercise Carolyn Kisner 2017-10-18 Here is all the guidance you need to customize interventions for individuals with movement dysfunction. You'll find the perfect balance of theory and clinical technique. In-depth discussions of the principles of therapeutic exercise and manual therapy and the most up-to-date exercise and management guidelines.

Biochemistry and Cell Biology of Ageing: Part II Clinical Science J. Robin Harris 2019-03-27 This volume of the subcellular Biochemistry series will attempt to bridge the gap between the subcellular events that are related to aging as they were described in the first volume of this set of two books and the reality of aging as this is seen in clinical practice. All chapters will start from the biochemistry or cell biology, where the data is available and work up towards the understanding that we have of aging in the various areas that are related to the subject. Key focus points for this volume are nutrition, external factors and genetics on aging. There will also be chapters that will focus on various organs or tissues in which aging has been well studied, like the eyes, the muscles, the immune system and the bones. The aim of the book project and the book project that is published in concert with this volume is to bring the subcellular and clinical areas into closer contact.

Cells and Human Health, Third Edition Michael Newman 2021-12-01 The amazing complexity of human anatomy and physiology is dependent upon its single most basic unit: the cell. Humans can attribute their overall health to homeostasis, the balance of activity within properly functioning cells. Additionally, cells are affected by the food we eat along with the microscopic entities that make us ill. Cells and Human Health, Third Edition covers how cells work to maintain human health and immunity as well as the history of cell discovery and the basics of cellular activity. Readers will also learn the processes of illnesses and corresponding genetics that compromise a cell's proper activity in the human being.

Nutrition for the Older Adult Melissa Bernstein 2019-01-02 Updated to the latest data and expert information, the Third Edition of Nutrition for the Older Adult introduces students to the unique nutritional needs of this growing population. Designed for the undergraduate, the text begins by covering the basics, including the demographics of aging, physiology of aging, and vitamin and mineral requirements for older adults. It then delves into clinical considerations, including the nutritional implications of diseases and conditions common among older adult. Additional coverage includes: nutritional assessment, pharmacology, nutritional support, and much more. With new pedagogical features along with revamped

end-of-chapter activities and questions, Nutrition for the Older Adult is an essential resource for students in the fields of nutrition, nursing, public health and gerontology.

Physiological Basis of Aging and Geriatrics Paola S. Timiras 1994-09-16 Aging is an inevitable aspect of living. This book covers the aging process from a physiological viewpoint, examining all systems of the body and describing changes that occur with normal aging and in disease. Its primary focus is on humans, but some animal and in vitro research is included to explain mechanisms and theories of aging. Integrated aspects of aging (e.g., demography of aging) are considered, and preventive and interventive measures (pharmacology, diet, exercise) for ensuring healthful aging are discussed. The Second Edition of Physiological Basis of Aging and Geriatrics considers many new approaches and methods for studying the aging process. New and updated information on molecular and cellular mechanisms, pathology, and aging-related diseases is provided to promote a better understanding of basic biological mechanisms. Theories, epidemiology, demographics, and comparative and differential aging are also presented.

Cells, Tissue, and Skin, Third Edition Donna Bozzone 2021-08-01 Cells are the smallest units capable of sustaining life, and they make up virtually every aspect of the human body. From the strands of hair at the top of the head to the nails on fingers and toes, every structure of the human body is composed of cells. Groups of cells form tissues and organs, which allow the body to function as an organized system. Skin, the body's largest organ, forms a waterproof barrier that provides protection against invading microorganisms and acts as a sensory and thermoregulatory structure. Cells, Tissues, and Skin, Third Edition explores the properties of each of these components in our bodies. Packed with full-color photographs and illustrations, this absorbing book provides students with sufficient background information through references, websites, and a bibliography.
