An Introductory Guide to EC Competition Law and Practice Valentine Korah 1994

AP Biology Richard P. Heller 1990 Reviews biochemistry, cells, genetics, evolution, ecology and more plus provides practice tests and their answers.

School Library Journal 1998

Biology Fundamentals Gilbert D. Brum 1995-02-07 Promoting the process of science and the wonder of discovery, this text focuses more on

concepts in biology and less on detailed information on biological procedures. Every chapter begins with Steps to Discovery vignettes which tell the story of how an investigation led to a scientific breakthrough, describing the people, ideas and thought processes involved. Using evolution as its theme the book includes critical thinking questions which encourage readers to become more science literate by applying their knowledge to other areas of biology and science.

CD-ROM for Librarians and Educators Barbara Sorrow 1996

Arranged by subject, this greatly expanded and completely updated edition of one of our most popular works provides a descriptive annotation of over 800 (up from 300+) educational resources available on CD-ROM. A basic introduction to this still relatively new technology is given, as is a basic collection development policy. Each entry includes title, producer, format, subject, price, grade level (K-12 or general audience), hardware and software required, distributor, price and a full description. A listing of CD-ROM distributors is also provided.

Bayesian Networks in Educational Assessment Russell G. Almond

2015-03-10 Bayesian inference networks, a synthesis of statistics and expert systems, have advanced reasoning under uncertainty in medicine, business, and social sciences. This innovative volume is the first comprehensive treatment exploring how they can be applied to design and analyze innovative educational assessments. Part I develops Bayes nets' foundations in assessment, statistics, and graph theory, and works through the real-time updating algorithm. Part II addresses parametric forms for use with assessment, model-checking techniques, and estimation with the EM algorithm and Markov chain Monte Carlo (MCMC). A unique feature is the volume's grounding in Evidence-Centered Design (ECD) framework for assessment design. This "design forward" approach enables designers to take full advantage of Bayes nets' modularity and ability to model complex evidentiary relationships that arise from performance in interactive, technology-rich assessments such as simulations. Part III describes ECD, situates Bayes nets as an integral component of a principled design process, and illustrates the ideas with an in-depth look at the BioMass project: An interactive,

standards-based, web-delivered demonstration assessment of science inquiry in genetics. This book is both a resource for professionals interested in assessment and advanced students. Its clear exposition, worked-through numerical examples, and demonstrations from real and didactic applications provide invaluable illustrations of how to use Bayes nets in educational assessment. Exercises follow each chapter, and the online companion site provides a glossary, data sets and problem setups, and links to computational resources.

Color Atlas of Genetics Eberhard Passarge 2012-12-12 From reviews of previous editions: A remarkable achievement concise but informative No geneticist or physician interested in genetic diseases should be without a copy -- American Journal of Medical Genetics Ever since the international Human Genome Project achieved its extraordinary goal of sequencing and mapping the entire human genome with far-reaching implications for understanding the causes and diagnosis of human genetic disorders progress in the field has been rapid. In the fourth edition of the bestselling Color Atlas of Genetics, readers will get a full overview of the field today, with an emphasis on the interface between fundamental principles and practical applications in medicine. The book utilizes the signature Flexibook format designed for easy visual learning and retention, and is invaluable for students, clinicians, and scientists interested in keeping current in this fast-moving area. New topics in the fully revised fourth edition of this highly praised atlas: Genetic signaling pathways involved in genetic disorders DNA repair systems Genomic disorders and genome-wide association studies Cancer genomes Ciliopathies, neurocristopathies, and other groups of causally related disorders Epigenetic changes in certain disorders Illustrated outline of human evolution With almost 200 stunning color plates concisely explained on facing pages, and including useful tables of data, a glossary of terms, key references, and online resources, this book makes every concept clear and accessible. It is an excellent introduction to genetics and basic genomics for students of medicine and biology, as well as an ideal teaching aid and refresher for investigators in any field of medicine or science.
