Aug 7, 2021 · Learn what a fluid is in physics and other sciences. Get the definition and see examples of fluids in everyday life. Section Summary A fluid is a state of matter that yields to sideways or shearing forces. Liquids and gases are both fluids. Fluid statics is the physics of stationary fluids. A situation that is fluid is unstable and is likely to change often. The situation is extremely fluid and it can be changing from day to day. Fluids flow easily and take on the shape of their containers. All liquids and gases are fluids. fluid adjective (LIKELY TO CHANGE) If situations, ideas, or plans are fluid,

they are not fixed and are likely to change, often repeatedly and unexpectedly: The meaning of FLUID is having particles that easily move and change their relative position without a separation of the mass and that easily yield to pressure : capable of flowing. In physics, a fluid is a liquid, gas, or other material that may continuously move and deform (flow) under an applied shear stress, or external force. [1] They have zero shear modulus, or, in simpler terms, are ... In contrast, liquids deform easily when stressed and do not spring back to their original shape once the force is removed because the atoms are free to slide about and change neighbors—that is, they flow ... FLUID definition: a substance, as a liquid or gas, that is capable of flowing and that changes its shape at a steady rate when acted upon by a force
