**Java Software Solutions, Foundations of Program Design, Global Edition (Book)** John Lewis 2026-02-18 Java Software Solutions helps you gain the knowledge and skill you need to design true object-oriented solutions. A natural progression of concepts focuses on the use of objects before learning how to write them. Sound programming practices are introduced and reinforced, giving you clear guiding principles to engineer good software. Both small and large real-world examples let you practice sharpening your problem-solving and design skills. Graphics and GUI sections serve as excellent visual examples of object-orientation. The 10th Global Edition is updated to keep pace with the ever-evolving Java language. New examples and sections keep the material fresh and improve the discussion of individual topics.

*Java Software Solutions* Ford 2004-09-06 The previous three editions have established Fluid Mechanics as the key textbook in its field. This fourth edition continues to offer the reader an excellent and comprehensive treatment of the essentials of what is a truly cross-disciplinary subject, while also providing in-depth treatment of selected areas. This book is suitable for all students of civil, mechanical, chemical, environmental and building services engineering. The fourth edition retains the underlying philosophy of the previous editions - guiding the reader from the general to the particular, from fundamentals to specialist

applications - for a range of flow conditions from bounded to free surface and steady to time dependent. The basic 'building block' equations are identified and their development and application to problems of considerable engineering concern are demonstrated and discussed. The fourth edition of Fluid Mechanics includes: end of chapter summaries outlining all essential concepts, an entirely new chapter on the simulation of unsteady flow conditions, from free surface to air distribution networks, enhanced treatment of dimensional analysis and similarity and an introduction to the fundamentals of CFD

*Design Patterns for e-Science* Henry Gardner 2007-05-03 This is a book about a code and about coding. The code is a case study which has been used to teach courses in e-Science at the Australian National University since 2001. Students learn advanced programming skills and techniques in the Java language. Above all, they learn to apply useful object-oriented design patterns as they progressively refactor and enhance the software. We think our case study, EScope, is as close to real life as you can get! It is a smaller version of a networked, graphical, waveform browser which is used in the control rooms of fusion energy experiments around the world. It is quintessential "e-Science" in the sense of e-Science being "computer science and information technology in the service of science". It is not, specifically, "Grid-enabled", but we develop it in a way that will facilitate its deployment onto the Grid. The

standard version of EScope interfaces with a specialised database for waveforms, and related data, known as MDSplus. On the accompanying CD, we have provided you with software which will enable you to install MDSplus, EScope and sample data files onto Windows or Linux computers. There is much additional software including many versions of the case study as it gets built up and progressively refactored using design patterns. There will be a home web-site for this book which will contain up-to-date information about the software and other aspects of the case study.

**Lab Manual** John Lewis 2006-03 With lab exercises covering important topics in all 12 chapters, this lab manual will accompany the Fifth Edition of the Lewis and Loftus, Java Software Solutions. The exercises provide hands-on experience with programming concepts introduced in an introductory programming course. Manual solutions and source code are available online.
