Product Innovation Management Stefano Biazzo 2021-07-02 This book offers new insights into the complex set of activities and decisions of product innovation management. It provides concepts, methods, and tools that can help accelerate the introduction of successful products to the market in an increasingly competitive and changing business landscape. It also offers examples and case studies, and it is the result of more than 20 years of study, research, and consulting carried out by the two authors in the field of innovation management. The book discusses the demanding challenges of product innovation and offers practitioners guidance on how to respond to these challenges. It presents a three-level framework (the "innovation pyramid"), which reflects the core components of a firm's innovation capability: first, intelligence - absorbing information and knowledge from the outside world by looking beyond the familiar territories of the current market, technology, and customers; second, discovery - exploring opportunities for innovation through creative ideation and technology experimentation; and third, development - transforming opportunities into profitable new products and services.

Strategy and the Business Landscape Pankaj Ghemawat 2001 Presents a historical perspective on business-level (versus corporate-level) strategy, while addressing contemporary debates in the field. Based on several Harvard Business School professors' experience teaching the school's first-year course on competition and strategy, the text presents important

The Strategy Process Henry Mintzberg 1995 This is the first European edition of Mintzberg and Quinn's Strategy Process. Based upon the second edition of the original, this version has been radically revised to produce a shorter, more European approach: more than 60% of the cases are now fully European. There are important new readings to replace older or inappropriate readings and a new section on the global context is included. All of the revisions have been made in response to extensive feedback from European adopters.

R&D Strategy & Organisation: Managing Technical Change In Dynamic Contexts Vittorio Chiesa 2001-03-09 This book deals with key issues and trade-offs in R&D strategy and organisation, paying attention especially to dynamic competitive contexts where technology plays a key role. These topics are treated from the perspective of the decision taker, i.e. the manager who makes decisions in terms of R&D strategy and organisation. The book addresses typical problems of large firms having structured R&D and operating businesses where R&D is a source of competitive advantages. Although it focuses strongly on R&D, it sees R&D as a part (a key part) of the process of technological innovation, and therefore as an activity to be strongly and appropriately integrated with other functions to make innovation successful. This book is primarily conceived as an academic review of research topics. Therefore the main audience is composed of scholars, researchers and PhD students. However, the book can be useful for postgraduate students taking MBA electives, or students attending courses on technology management. It is also relevant to R&D managers and, more generally, people responsible for units concerned with technological innovation.

Strategic Management and Organisational Dynamics Ralph D. Stacey 2003 In this fourth edition, the author continues to question the view that organizations operate and succeed in relatively stable environments. He argues that they must create new perspectives and learn from the chaos within which they operate.

Managing Process Innovation: From Idea Generation To Implementation

Thomas Lager 2010-10-19 This book will take the reader through a systematic examination of the factors involved in process innovation. It starts with the considerations to be initiated in the boardroom and at group management level and develops into a hands-on guide for middle management and professional engineers directly involved in the innovation of process technology. The book initially puts process innovation in a corporate perspective, providing a framework for the development of a corporate process innovation strategy. Some new methodological tools are also introduced which support the targeting and proper roadmapping of improved process capabilities, and the progression of customer and end-user product demands, into raw-material specifications in a well-managed supply and demand chain. Various aspects of the design of a process innovation organisation are reviewed in a later section. In the context of the development of process technology, this book advocates the importance of delineating and clarifying corporate work processes. Various environments for development work are discussed, from initial test work to pilot-plant testing and the use of demonstration facilities to achieve lean process innovation. The importance of an open collaborative approach is stressed. This includes involving external equipment manufacturers at an early stage as well as collaborative development of customers' use of the products in their production processes, with a view to excellence in future application development. Process innovation will not, however, generate profit or reduce operating costs until the new or improved process technology is operating well in the plant. Best practice for start-up of new process technology and process plants is examined, starting with a fresh outlook on technology transfer in general. This often-neglected area of management of process innovation is, in fact, of an importance equivalent to that of a product launch in the development of new products. The final part of the book closes the circle, discussing how to implement and measure the strategic intent of process innovation. Improving the general performance of corporate process innovation is then covered by going through success factors and key performance indicators, and their aggregation on a corporate level.

R & D Strategy and Organisation Vittorio Chiesa 2001-01-01 Covering the major considerations of R&D strategy and organization, this book focuses on the key role of technology in dynamic competitive contexts. Written for scholars and managers, the book provides an academic review of research topics. It discusses typical problems associated with R&D, treating R&D always as a key part of a larger process of technological innovation. Chiesa teaches at the Università degli Studi di Milano.
