Greedy Algorithms for Mapping Onto a Coarse-grained Reconfigurable Fabric Colin J. Ihrig 2008 In this chapter we have presented three greedy heuristics for mapping applications onto a reconfigurable device oriented for low-energy execution. The three heuristics are a deterministic top-down greedy algorithm described in Section 4, a greedy algorithm with randomization discussed in Section 5 based on the deterministic algorithm flow, and a partial MILP greedy heuristic presented in Section

6. Here we compare the deterministic, randomized, weighted randomized, and sliding partial MILP heuristics described in Section 4, Section 5.1, Section 5.2, and Section 6, respectively. The comparisons are made using a 5:1-based interconnect and are shown in Table 11. The results compare the different heuristics in terms of fabric size, path length increase, and mapping time.

Transforming Technologies in Smart Agriculture Zhao Zhang 2024-08-01

This book collects transforming technologies in smart agriculture and their applications during the past decade. It focuses on the latest sensing and automation technologies for field and specialty crop production, and provides a lot of innovative knowledge on imaging processing, AI algorithms, robotics, and their applications in agriculture. It provides undergraduate or graduate students take-away knowledge for unmanned agriculture production, including but not limited to, corn/wheat disease detection, cotton yield prediction, and apple detection. Furthermore, this book includes review reports on plant phenotyping sensing and automation technologies and techniques for aphid detection.
