

Deep Ecology For The Twenty First Century

Deep Ecology for the Twenty-First Century George Sessions 1995-01-24
Instead of thinking of nature as a resource to be used for human needs, deep ecology argues that the true value of nature is intrinsic. This comprehensive and wide-ranging anthology contains almost 50 articles by the leading writers and thinkers in the field, offering a broad array of perspectives on this important approach to environmentalism.

American Environmental Leaders [2 volumes] Anne Becher 2000
Features: -- Unique in the breadth of coverage; includes biographies of both prominent and obscure environmentalists-- Introduces readers to poets, landscape architects, presidents, painters, activists, even sanitation engineers, and others who have forever altered how we think about the environment

Main Currents in Western Environmental Thought Peter Hay 2002-02-21
Topics covered include the roots of environmental philosophy; the development of ecophilosophy, deep ecology, and ecofeminism; how religion relates to environmental values; environmentalists' writings on science and epistemology; animal liberation; the role of place; the economic dimensions of environmental thought; environmental writing in various political traditions; and "green" writers' critiques of political movements. The work draws from the disciplines of philosophy, political science, psychology, sociology, and cultural studies.

Hinduism and Ecology Christopher Key Chapple 2000 "In this volume, scholars of Hinduism, Hindu practitioners, and environmental activists discuss the past history and future prospects for the development of environmentally responsive forms of Hinduism. Topics include the Vedic viewpoint on nature, the potential contribution of Gandhian thought, forest ecology in India, the degradation and damming of river systems, and Hindu grassroots approaches to environmental restoration."--BOOK

Environmental Problem-Solving: Balancing Science and Politics Using Consensus Building Tools Lawrence Susskind 2020-10-31 'Environmental Problem-Solving' presents short excerpts from carefully selected readings, expert commentaries on those readings, assignments, and the best MIT student responses to the assignments and exam questions with excellent student response. The book presents four main models of environmental policy-making: competing theories of environmental ethics; tools for environmental assessment and environmental decision-making; and techniques for public engagement and group decision-making. The book covers the material presented in the semester-long course required of all students enrolled in MIT's Environmental Policy and Planning Specialization.

Environmentalism David Peterson Del Mar 2014-05-22
Environmental movements have produced some impressive results, including cleaner air and the preservation of selected species and places. But movements that challenged western prosperity and comfort seldom made much progress, and many radical environmentalists have been unabashed utopianists. In this short guide, Peterson del Mar untangles this paradox by showing how prosperity is essential to environmentalism. Industrialisation made conservation sensible, but also drove people to look for meaning in nature even as they consumed its products more relentlessly. Hence Englandled the way in both manufacturing and preserving its countryside, and the United Statescreated a matchless set of national parks as it became the world's pre-eminent economic and military power. Environmentalismconsiders both the conservation and preservation movements and less organized forms of nature loving (from seaside vacations to ecotourism) to argue that these activities have commonly distracted us from the hard work of creating a sustainable and sensible

relationship with the environment.

Environmental Ethics 2006

Deep Ecology For The Twenty-first Century George Sessions 1995-01-01

Discusses the fundamental relationship between human beings and nature, and suggests an ethical and philosophical foundation for environmental protection in the next hundred years

Confronting Twenty-first Century Challenges Ruth Mukama 2004

Ageing and Human Development Ishwar Modi 2001 "Ageing of global society and its impact on human development is a major concern of the twenty-first century. In its varied ramifications, ageing has acquired unprecedented significance both nationally and internationally. This book is an outcome of the academic euphoria generated by the un international year of older persons (1999) and reflects voices and visions of scholars focussing their attention, analysis and discourses on as many as 19 countries across the globe. Cogently argued essays, based on primary as well as secondary data, provide a valuable framework to assess the problems and the status of elderly in a global cross-cultural perspective, making the book a worthy source material not only for sociologists, psychologists, gerontologists and social work scholars but also for the ngos working in the field."

Companion to Environmental Thought Peter Hay 2019-07-30 A

Companion to Environmental Thought sets out to introduce the many strands of thought within the western environment movement. It provides a comprehensive overview of the complex and endlessly transforming state of western environmentalism, surveying the main strands of thought from the fields of politics, philosophy, religion, and economics. Peter Hay presents the major issues debated in these fields by environmentalists, and also by their opponents. Each chapter covers the main strands of thought in detail and also includes the seminal contributions from any 'sub-strands'. Each chapter concludes with a

section considering the problems that face the particular line of thought presented. With its broad-ranging coverage this book is likely to become a core textbook on all environment-related courses.

Property Law on the Threshold of the Twenty-first Century Gregory S. Alexander 1996 "Proceedings of an international colloquium 'Property Law on the Threshold of the 21st Century, ' 28-30 August 1995, Maastricht.

American Environmental Leaders: L-Z Anne Becher 2000 This book presents more than 350 biographies of men and women who have devoted their lives to studying, debating, and organizing controversial environmental issues over the last 200 years. In addition to the scientists who have analyzed how human actions affect nature, we are introduced to poets, landscape architects, presidents, painters, activists, even sanitation engineers, and others who have forever altered how we think about the environment. The easy to use A-Z format provides instant access to these individuals, and frequent cross references indicate others with whom individuals worked (and sometimes clashed). End of entry references provide users with a starting point for further research.

Measuring and Evaluating Sustainability Sarah E. Fredericks 2013-08-15 The indexes used by local, national, and international governments to monitor progress toward sustainability do not adequately align with their ethical priorities and have a limited ability to monitor and promote sustainability. This book gives a theoretical and practical demonstration of how ethics and technical considerations can aid the development of sustainability indexes to overcome this division in the literature and aid sustainability initiatives. *Measuring and Evaluating Sustainability* develops and illustrates methods of linking technical and normative concerns during the development of sustainability indexes. Specifically, guidelines for index development are combined with a pragmatic theory

of ethics that enables ethical collaboration among people of diverse ethical systems. Using the resulting method of index development, the book takes a unique applied turn as it ethically evaluates multiple sustainability indexes developed and used by the European Commission, researchers, and local communities and suggests ways to improve the indexes. The book emphasizes justice as it is the most prevalent ethical principle in the sustainability literature and most neglected in index development. In addition to the ethical principles common to international sustainability initiatives, the book also employs a variety of religious and philosophical traditions to ensure that the ethical evaluations performed in the text align with the ideals of the communities using the indexes and foster cross-cultural ethical dialogue. This volume is an invaluable resource for students, researchers and professionals working on sustainability indicators and sustainability policy-making as well as interdisciplinary areas including environmental ethics; environmental philosophy; environmental or social justice; ecological economics; businesses sustainability programs; international development and environmental policy-making.
