Calculus Robert Smith 2011 Now in its 4th edition, Smith/Minton, *Calculus: Early Transcendental Functions* offers students and instructors a mathematically sound text, robust exercise sets and elegant presentation of calculus concepts. When packaged with ALEKS Prep for Calculus, the most effective remediation tool on the market, Smith/Minton offers a complete package to ensure students success in calculus. The new edition has been updated with a reorganization of the exercise sets, making the range of exercises more transparent. Calculus, Single Variable Robert Thomas Smith 2007-02-01 Students who have used Smith/Minton's *Calculus* say it is easier to read than any other math book they've used. Smith/Minton wrote the book for the students who will use it, in a language that they

understand, and with the expectation that their backgrounds may have gaps. Smith/Minton provide exceptional, reality-based applications that appeal to students' interests and demonstrate the elegance of math in the world around us. Features new to the third edition include: * Many new exercises and examples (for a total of 7,000 exercises and 1000 examples throughout the book) provide a careful balance of routine, intermediate and challenging exercises * New exploratory exercises in every section that challenge students to make connections to previous introduced material. * New commentaries ("Beyond Formulas") that encourage students to think mathematically beyond the procedures they learn. * New counterpoints to the historical notes, "Today in Mathematics," stress the contemporary dynamism of mathematical research and applications, connecting past contributions to the present. * An enhanced discussion of differential equations and additional applications

of vector calculus. * Exceptional Media Resources: Within MathZone, instructors and students have access to a series of unique Conceptual Videos that help students understand key Calculus concepts that are among the most difficult to comprehend, Interactive Applets that help students master concepts and procedures, algorithmically generated exercises, and "e-Professor" animations.

Discovering Calculus with the HP-28 and the HP-48 Robert Thomas Smith 1992 This supplementary text for the standard calculus course focuses on how the HP-28S and the HP-48SX (2 graphing supercalculators) will aid in improving students' understanding of calculus. The calculators are capable of rapid production of graphics and calculations so classes that have access to the machines will save valuable time on graphing and calculations. With supercalculators such as the HP-28S and the HP-48SX, students can focus on true

Calculus concepts rather than on computational details.

Discovering Calculus with the TI-81 and the TI-85 Robert Thomas Smith 1993 Focusing on how the TI-81 and the TI-85 (two graphing calculators) are designed to aid in the understanding of calculus, this book concentrates on the discovery of relationships and experimenting rather than on computational details. Differences between the two calculators are pointed out where appropriate, as the TI-85 is newer and developed especially for the calculus audience. By not emphasizing button pushing, but concepts and the application of those concepts, a simple programme is built to improve skills. In addition, many programming notes are included throughout.
