Organizational Behavior in Sport

Management Christopher R. Barnhill
2021-04-09 This textbook presents a comprehensive analysis of organizational behavior in sport organizations from a practitioner's perspective. It covers issues related to managing employees and work teams as well as organizational structure and culture in sport. The book has four sections: Organizational Behavior in the Sports Industry, Getting to Know Employees and Volunteers of Sport Organizations, Work Groups and Teams, and Understanding the Organization. Each chapter begins with a practitioner interview describing a challenge that was overcome by their organization. That example is used to highlight applicable theories and interventions used in the industry. Additional examples or theories are discussed to provide students a broad picture of managerial issues in the sports industry and provide alternative approaches to intervention illustrated in the practitioner interview. The case studies offer the opportunity to practice and apply the ideas to real-world scenarios in the sports industry. Students using this book will gain an understanding of how managers and leaders apply theory to communicate with and engage employees to foster desired organizational cultures while being challenged to address common issues using cases and hypothetical situations.

For example, diversity across Europe, the extent of employee engagement, and the popularity of working in teams. "As a whole, the content of the book is strong, and is well-structured with a European focus." Mohammad Lafiti, Uppsala University, Sweden

Transforming Health Care Through Information: Case Studies Laura Einbinder 2010-03-14 By any measure, our field of clinical informatics is poised for rapid growth and expansion. A confluence of forces and trends, including pressure to contain health care costs and simultaneously expand access and coverage, a desire to reduce medical error and health care disparities, the need to better understand and optimize our clinical interventions and delivery systems, the need to translate new knowledge into practice quickly and effectively, and the need to demonstrate the value of our services, all call for the application of the methods and techniques of our field - some of which are well honed with experience, and some of which are still in the process of being discovered. Clinical informatics is not the only solution to what ails health care, but it is a critical component of the solution. Our methods and techniques are similar in many ways to the knowledge base of any interdisciplinary field: some are informed by experience, the trials and tribulations of figuring out what works through real world implementation, some are informed by controlled experimentation in randomized controlled trials and related studies, some are informed by critical observation and analysis,

and some are developed through laboratory evaluation rather than field trials. As we develop both the basic science, as well as the applied science, of our field, there is a critical role for learning from others by way of case reports and stories.
