about structure-reactivity and chemical processes is a key competence in chemistry.

Especially in organic

chemistry, students experience

difficulty appropriately

interpreting organic

representations and reasoning

about the underlying causality

of organic mechanisms. As

organic chemistry is often a

bottleneck for students'

success in their career,

compiling and distilling the

insights from recent research

in the field will help inform

future instruction and the

empowerment of chemistry

students worldwide. This book

brings together leading

research groups to highlight

recent advances in chemistry

education research with a

focus on the characterization of

students' reasoning and their representational competencies,

as well as the impact of

instructional and assessment

practices in organic chemistry.

Written by leaders in the field,

this title is ideal for chemistry

education researchers,

instructors and practitioners,

and graduate students in

chemistry education.

Teaching can be intimidating

for beginning faculty. Some

graduate schools and some

computing faculty provide

guidance and mentoring, but

many do not. Often, a new faculty member is assigned to teach a course, with little guidance, input, or feedback. *Teaching Computing: A Practitioner's Perspective* addresses such challenges by providing a solid resource for both new and experienced computing faculty. The book serves as a practical, easy-to-use resource, covering a wide range of topics in a collection of focused down-to-earth chapters. Based on the authors' extensive teaching experience and his teaching-oriented columns that span 20 years, and informed by computing-education research, the book provides numerous elements that are designed to connect with teaching practitioners, including: A wide range of teaching topics and basic elements of teaching, including tips and techniques Practical tone; the book serves as a down-to-earth practitioners' guide Short, focused chapters Coherent and convenient organization Mix of general educational perspectives and computing-specific elements

Connections between teaching in general and teaching computing Both historical and contemporary perspectives This book presents practical approaches, tips, and techniques that provide a strong starting place for new computing faculty and perspectives for reflection by seasoned faculty wishing to freshen their own teaching.

examines the experiences and challenges faced by traditionally marginalized groups in STEM, most notably culturally and linguistically diverse students and women. Investigations into these issues, as well as the high dropout rate among engineering students and issues of academic integrity in STEM, come with detailed explanations of the study methodologies used in each case. Contributors also provide personal narratives that share their perspectives on the benefits of qualitative research methodologies for the topics explored. Through a variety of qualitative methodologies, including participatory action research, Indigenous research, and critical ethnography, this volume aims to reveal and remedy the inequalities within STEM education today.
