Industrial Inorganic Chemistry

adds to the previously

published graduate level

textbooks on Industrial

Chemistry by Mark A.

Benvenuto. It focuses

specifically on inorganic

processes, from the largest

industrial process for the

production of major inorganic

chemicals and metals, down to
and including smaller niche
processes that have become
extremely important in
maintaining the current quality
of life. The book provides a
survey on the production of
essential elements and
compounds, such as sulfuric
acid, calcium carbonate,
fertilizers as well as numerous
metals and alloys. In addition
to the fundamental scientific
principles each chapter
includes discussions on the
environmental impacts: mining
of raw materials, creation of
by-products, pollution, and
waste generation, all of which
have become key factors for
the potential implementation of
greener methods. The author
also highlights ways in which
industry has begun to make
industrial inorganic processes
more environmentally benign.
Examines major inorganic
chemistry processes, their
effect on every-day life and
current efforts to improve
processes or adapt „green“
chemical production. Provides
didactic links between
theoretical lecture contents

and current, largescale chemical processes. Valuable for students of Inorganic Chemistry, Industrial Chemistry, Chemical Engineering and Materials Sciences.
