**Increased Biodiesel Efficiency** Magno Trindade 2018-01-28 This book advances the use of biodiesel—more environmentally friendly than traditional fossil fuels—by showing how it can be synthesized at a lower cost, with greater efficiency and as a more pure and stable product. It presents methods based on fluorescence spectroscopy, which are less time-consuming than the traditional Rancimat

analysis for monitoring stability, and are therefore less prone to allowing oxidative decay in the biofuel. Biodiesel exploits a variety of raw materials, from freshly harvested cottonseed to recycled cooking oil. These are cheap to produce and generate fuel lower in polluting sulphur and aromatic compounds than its petroleum-based equivalent. Beginning by addressing different protocols for synthesis based on fatty acids, methyl and ethyl esters, it then describes chemical analyses essential to establishing the purity of the biodiesel. It highlights in detail the use of multifunctional and synthetic antioxidants, and investigates the impact of synthetic chalcones and their derivatives on the oxidative stability of biodiesel. The author goes on to explain how to ameliorate various influences - UV irradiation and metal contaminants for example - which increase the hazards of oxidation, such as degradation and instability. New pre-treatment procedures performed using ultrasonic energies, thermostatic bath and vortex stirring are not only more environmentally friendly, but cut down on the time-consuming process of determining metal content, and allow for the use of more environmentally friendly aqueous reagents. The book investigates and demonstrates these techniques on the basis of real-world results. Further, it suggests the practical uses of byproducts of biodiesel production, for example, using glycerol as a source of energy and high valuable chemicals. These useful techniques aid any researcher exploring the production process of biodiesel and its stabilization and characteristics.

*Food Waste Valorization* Olalere Olusegun Abayomi 2024-08-06 *Food Waste Valorization: Emerging Trends, Techno-economic and Environmental Considerations* covers bioactive extraction, therapeutic properties and environmental concerns related to food waste conversion to value-added products, along with advanced technological breakthroughs in the field. The book also provides concepts and theories on several facets of agro-food waste valorization and its by-products, as well as

opportunities and challenges. Each chapter contains viewpoints from different fields of research such as Basic Science, Agriculture, Food Science and Engineering, Chemical Engineering, Mechanical Engineering, Environmental Science, and more, with each having a unique approach to food waste valorization as it relates to their field. This is an invaluable resource for research and development professionals in post-harvest processing and renewable energy industries, as well as the academicians. - Identifies industries and products to make use of food waste - Discusses technological and environmental impacts of food waste valorization - Focuses on maximizing food waste utilization with minimum adverse impact - Provides perspectives from food science, agriculture, engineering, and environmental science

**Biofuels** Samudra Prosad Banik 2024-05-14  
Biofuels are promising eco-friendly, renewable energy alternatives, simultaneously curbing the dependence on depleting fossil fuel reserves, reducing the global carbon footprint. However, there have been technological constraints deterring the global wide-scale adoption of biofuel. *Biofuels: Scientific Explorations and Technologies for a Sustainable Environment* presents a comprehensive analysis of different types of biofuels. Five sections provide detailed information on the history and discovery of biofuels, first-generation biofuels, second-generation biofuels, third-generation biofuels, and beyond, as well as prospects of biofuels as cleaner and greener alternatives. **FEATURES**  
Introduces the history of the origin of biofuels  
Narrates the evolution of biofuel raw material beyond generations, from food crops to plastic waste  
Explains the application of primary biofuel types: biodiesel, bioethanol, and biohydrogen  
Discusses the promises and prospects of biofuel for a cleaner, sustainable future  
**Biofuels: Scientific Explorations and Technologies for a Sustainable Environment** analyzes the promising future of biofuel technology and its judicious use

to minimize dependency on fossil fuels. It is designed for academia, scientists, and researchers, as well as industrialists, environmentalists, biofuel technicians, R&D industries, and those from the petroleum industry.

Jatropha Curcas as a Premier Biofuel Claude Ponterio 2010 Among the oil-bearing tree species, *Jatropha curcas* is currently becoming an interesting crop for the production of biodiesel due to some of its interesting properties including resistance to drought, possibility to grow well and quickly on marginal lands without much fertiliser inputs and the need for only moderate rainfall. In this book, a series of biotechnological methodologies is reported, such as vitro propagation and plant breeding of *Jatropha curcas* for the sustainable production of biodiesel. An overview of the currently available information on the different research on the production of biodiesel using *Jatropha* raw material is also given in terms of catalysts and possible non-edible feedstocks to be utilised in the process. In addition, the different options to include *Jatropha* in agroforestry systems are described. Their potential social, economic and environmental risks and benefits are discussed. In particular, land use changes related to *Jatropha* cultivation, their possible impact on food supplies and the up-scaling possibilities are focused upon. Based on this assessment, the authors provide clear guidelines for the expansion of *Jatropha* cultivation on a sound socio-economic and environmental basis. Moreover, Yunnan is the richest wild *Jatropha* resources province now and is to become the greatest *Jatropha* planting forest province in the following ten years. This book describes the flowering, fruit setting, pollination, seeds biological characteristics of *Jatropha* under various conditions in Yunnan. Other chapters review the studies available to date about the impact of the introduction of the biofuel crops *Jatropha curcas* on greenhouse gas (GHG) emissions from land use change in tropical regions. This book also attempts to go beyond the pro-contra debate on bio-fuels to search for possible sustainable trajectories. Advances in Clean Energy Anand Ramanathan 2020-10-22 *Advances in Clean Energy: Production and Application supports sustainable*

clean energy technology and green fuel for clean combustion by reviewing the pros and cons of currently available technologies specifically for biodiesel production from biomass sources, recent fuel modification strategy, low-temperature combustion technology, including other biofuels as well. Written for researchers, graduate students, and professionals in mechanical engineering, chemical engineering, energy, and environmental engineering, this book: Covers global energy scenarios and future energy demands pertaining to clean energy technologies Provides systematic and detailed coverage of the processes and technologies used for biofuel production Includes new technologies and perspectives, giving up-to-date and state-of-the-art information on research and commercialization Discusses all conversion methods including biochemical and thermochemical Examines the environmental consequences of biomass-based biofuel use Substrate Analysis for Effective Biofuels Production Neha Srivastava 2020-01-31 As a substrate, cellulose plays a crucial role in the biomass-based biofuel production process, and is essential to enzyme and sugar production. Accordingly, ensuring maximum availability of cellulose for enzyme production and bioconversion for sugar generation is one of the major challenges for sustainable biofuels production. To date there has been extensive research on biofuel production using lignocellulosic biomass, but there is a huge gap when it comes to the critical analysis of cellulose content, structural feasibility, availability, and economic processing, so that it can be converted for enzyme and fuel production at low cost. Consequently, this book discusses the availability of lignocellulosic substrate for biofuel production in light of the challenges that the biofuels industry is currently facing. After identifying the major substrate selection challenges for the practical biofuel production process, the book addresses said challenges by focusing on various issues such as: potential substrates that have high cellulosic content, structural feasibility, and low-cost & effective processing to remedy the structural complexity of biomass structure and create added value. In addition, it covers recent advancements in cellulase production and outlines future

prospects. Given its scope, it offers a valuable guide for research students and industry practitioners alike.
