Problem Solving with C++ Walter J. Savitch 2007 Introductory Programming / C++ Problem Solving with C++, Sixth Edition Walter Savitch Walter Savitch's "Problem Solving with C++" is the most widely used textbook for the introduction to programming in C++ course. These are just a few of the reasons why: "My students and I love this textbook. Savitch makes the material so accessible, and he does it with a great sense of humor that we all enjoy. My students tell me that they finally have purchased a college textbook where they've gotten their full money's worth." -Jennifer Perkins, University of Arkansas at Little Rock "Our school has used the Savitch text for many years, and it has been well received by both faculty and students. Walter Savitch explains difficult programming concepts in a clear and concise manner and discusses all the important features of the C++ language." -Carol Roberts, University of Maine "Writing a book is an art if, and only if, it can create an artist. Savitch's book does just this. It contains fundamental materials presented in a pleasant way in which not only the flow consistency, but also the example consistency, is preserved." -Coskun Bayrak, University of Arkansas at Little Rock "The progression from programming basics to object-oriented concepts is logical and effectively leads beginning C++ students to an understanding of classes and more advanced topics." -Stephen Weissman, Burlington County College This Sixth Edition features: - Savitch's unparalleled clear and concise writing style - Extensive use of examples, exercises, and projects to promote good programming practice - Earlier coverage of loops and arrays - Enhanced discussion of debugging - All code updated to be ANSI/ISO compliant - Twonew programming projects per chapter MyCodeMate is a web-based, textbook-specific homework tool and

programming resource for an introduction to programming course. It provides a wide range of tools that students can use to help them learn programming concepts, prepare for tests, and earn better grades in the introductory programming course. Students can work on programming problems from this text or homework problems created by their professors, and receive guided hints with page references and English explanations of compiler errors. Instructors can assign textbook-specific or self-created homework problems, preset style attributes, view students' code and class compiler error logs, and track homework completion. A complimentary subscription is offered when an access code is ordered packaged with a new copy of this text. Subscriptions may also be purchased online. Data Abstraction and Problem Solving with C++ Frank M. Carrano 1995

This work provides novice and professional programmers with a bridge from traditional programming methods to the object-oriented techniques available in C++. It clearly explains encapsulation and C++ classes, which are then used throughout to implement abstract data types such as lists, stacks, queues, trees and tables. Inheritance, polymorphism, templates and operator overloading are explained both conceptually and through examples. The work offers early, extensive coverage of recursion and uses the technique through many examples and exercises. It sets out to provide a firm foundation in data abstraction, emphasizing the distinction between specification and implementation.

Data Structures with Java John Rast Hubbard 2004 For a freshman/sophomore-level course in Data Structures in Computer Science. This text teaches the use of direct source code implementations and the use of the Java libraries; it helps students prepare for later work on larger Java software solutions by adhering to software engineering principles and techniques such as the UML and the Java Collections Framework (JCF). Using the spiral approach to cover such topics as linked structures, recursion, and algorithm analysis, this text also provides revealing illustrations, summaries, review questions, and specialized reference sections.

Data Abstraction and Problem Solving with Java Frank M. Carrano 2006 The second edition, in Java, of the classic Walls and Mirrors approach to programming designs solutions to problems using both data abstraction (the walls) and recursion (the Mirrors). Data Abstraction and Problem Solving with Java: Walls and Mirrors, 2eprovides a focus on the important concepts of data abstraction and data structures in a way that beginning programmers find accessible. The first part of the book covers problem-solving techniques including a review of Java fundamentals, principles of programming and software engineering, recursion and data abstraction, and linked lists. Later chapters focus on problem solving with abstract data types including stacks, queues, algorithm efficiency

and sorting, trees, and graphs. This edition contains enhanced material on OO implementation. MARKET: Readers searching for problem solving solutions through abstraction, algorithmic refinement, data structures and recursion.

Data Abstraction and Problem Solving with C++ Frank M. Carrano 2005 Designed for a second course in computer science, this textbook introduces the data abstraction technique for building walls between a program and its data structures, and presents various abstract data types and their implementations as C++ classes. The author evaluates the advantages and disadvantages of array-based and pointer-based data structures, and explains the concepts behind recursion, inheritance, polymorphism, algorithm efficiency, and balanced search trees. Problem Solving, Abstraction, and Design Using C++ Frank L. Friedman 2004 Problem Solving, Abstraction, and Design Using C++ presents and then reinforces the basic principles of software engineering and object-oriented programming while introducing the C++ programming language. The hallmarks of this book are the focus on problem solving and program design. This book carefully presents object-oriented programming by balancing it with procedural programming so the reader does not overlook the fundamentals of algorithm organization and design.
