AMCP 706-202, *Engineering Design Handbook, Helicopter Engineering, Part Two, Detail Design*, is the second part of a three-volume helicopter engineering design handbook. The preliminary design (covered in AMCP 706-201) is developed during the proposal phase, at which time all subsystems must be defined in sufficient detail to determine aircraft configuration, weight, and performance. The detail design involves a reexamination of all subsystems in order to define each element thoroughly with the aims of optimizing the aircraft with regard to mission capability as well as cost considerations.

Engineering Design Handbook. Ammunition Series - Fuzes 1969

The *Engineering Design Handbooks of the U.S. Army Materiel Command* have evolved over a number of years for the purpose of making readily available basic information, technical data, and practical guides for the development of military equipment. While aimed primarily at U.S. Army materiel, the handbooks serve as authoritative references for needs of other branches of the Armed Services as well. The present handbook is one of a series on Fuzes. This handbook presents both theoretical and practical data pertaining to fuzes. Coverage includes initiation, arming, design, and tests of fuzes and their components. Both mechanical and electric fuze actions are treated. The fuzing of all conventional ammunition items is covered. Prepared as an aid to ammunition designers, this handbook should also be of benefit to scientists and engineers engaged in other basically related research and development programs or who have responsibility for the planning and interpretation of experiments and tests concerning the performance of ammunition or ammunition components.

Value Engineering U. S. Army Materiel Command 2006-08-01 Every body ought to be interested in Value Engineering (VE)! As wage-earners, the application of VE is helping American industry maintain its economic position in world markets, thereby protecting our jobs and careers. As taxpayers, the Department of Defense (DOD) VE program has come to the defense of the Defense dollar, with audited savings to us of over \$1.1 billion for fiscal years 1963 through 1966. As consumers, we today purchase many products at not only lower prices, but with greater value as well, because the manufacturer of those products is applying VE as an effective management tool. And all of these VE economic benefits have come rapidly. As recently as 1960-the application of this cost saving technique is dated back to 1947-wherever the technique had been intelligently and open-mindedly applied, it had been successful. With this acceptance and practice of the methodology have come rapid developments in the state of the art, and in the point of its application to the product cycle. What was once considered second look, Value Analysis-whereby the methodology was applied only after the entity of the product was well established-began moving back in the product development cycle for a first look into the design aspects of the product. Thus what was originally christened Value Analysis, synonymously became known as Value Engineering (VE)-a confirmation that served to justifiably raise the status of (and respect for) the technique. Value Engineering is therefore no longer on trial. It has proved itself repeatedly. But in spite of its name, its success has not come as a technological technique, but as a potent economic tool for management. Why? Because the record shows, without reservation, that the technique must have the rigorous and unqualified backing of management. Where VE has received this kind of support, management has reaped a return on investment in the order of 15: 1. This kind of performance, management understands!
