Biological Approaches to the Study of Human Intellegence Philip A. Vernon 1993

A Search for God Carmine G. Barba 2004

Should the act of creation by God be taken, i.e., can it be considered, in a light other than that of religion? Indeed, is it even possible to view it in terms of facts and knowledge, rather than one of faith? Virtually all organized religions assume the existence of God as the creator of the universe and all things in it. This belief has always taken the form of faith (and reason), i.e., it is an act of faith and not necessarily one of knowledge, which is in effect an assumption of belief, rather than one based on scientific fact, and unless this belief is brought into the realm of science, we can never be certain, beyond any doubt that God does indeed exist. This author explains how scientific principles can enter into the explanation of God's existence and how the Act of Creation itself comes out of the hiddenness of God's root source of energy and into the open realm of 3-dimensionality.

The Whats of a Scientific Life John R. Helliwell 2019-10-10 This book completes a scientific life trilogy of books following on from the Hows (i.e. skills) and the Whys is now the Whats of a scientific life. Starting with just what is science, then on to what is physics, what is chemistry and what is biology the book discusses career situations in terms of types of obstacles faced. There follow examples of what science has achieved as well as plans and opportunities. The contexts for science are dependencies of science on mathematics, how science cuts across disciplines, and the importance of engineering and computer software. What science is as a process is that it is distinctly successful in avoiding or dealing with failures. Most recently a radical change in what is science is the merger

of the International Council of Scientific Unions and the International Social Sciences Council.

Key Features: Dissects what is science and its contexts Provides wide ranging case studies of science and discovery based directly on the author's many decades in science The author has outstanding experience in mentoring and career development, and also in outreach activities for the public and students of all ages The world of science today involves a merger of 'the sciences' and the 'social sciences'
