## **Hydroclimatic Extremes in the Middle East and North Africa**

Ahmed Mohammed Hussain El Kenawy 2024-05-29 Hydroclimatic Extremes in the Middle East and North Africa:

Assessment, Attribution and Socioeconomic Impacts focuses on assessing the current situation of hydroclimatic extremes in the MENA region, with particular emphasis on dry and wet extreme events. The results of the rapidly changing atmospheric and oceanic situations of these extremes will be addressed, presenting examples for the environmental, socioeconomic, and cultural impacts of these events in the region and evaluating the current ability to monitor and adapt to such events, as well as exploring the potential use of advanced geospatial techniques in improving current understanding of these extreme events. The book utilizes a multidisciplinary approach with various state-of-the-art methods, approaches, and analytical techniques in environmental, meteorological, and hydrological sciences, providing case studies from the Middle East and North Africa. It will provide a solid basis for scientists to assess the validation of several research methods in the region and may be applicable to other regions as climate change continues to cause increasing aridity worldwide. The case studies presented will reflect the multifaceted character of hydrometeorological extremes in the region, with representative examples for the environmental, socioeconomic, and cultural impacts of climate change. Therefore, this book is a valuable source for climatologists, meteorologists, hydrologists, geographers, and water resources scientists. - Thoroughly details the effects of climate variability in the Middle East and North Africa, a hotspot region of climate change vulnerability -

Examines changes in hydroclimatic extremes at different spatial scales, ranging from local assessments to investigations that cover the entire region - Provides a comprehensive assessment of hydrometeorological feedback to current and future climate change in the MENA region - Fills the current gap in the literature concerning the response of arid and semiarid regions to climate change, with particular emphasis on the MENA region

**Climate Variability and Agriculture** Y. P.

Abrol 1996 The nature of variability/change of important climatic parameters over some parts of the tropics such as the Indian region have been extensively studied and documented. However, there the major lacunae in the knowledge of the variability change over important regions of the South Asian Monsoon such as Bangladesh, Sri Lanka and Pakistan. The assessments of possible impact of global climate change on critical resources such as agricultural productivity are based on a combination of results from climate model runs for enhanced greenhouse gases and crop models. The uncertainties of climate model predictions on regional scale are, however, well known. Further, there are large inter-model differences in yield predictions even for the same climatic data.

*Climate Change and Environmental Impacts: Past, Present and Future Perspective* Binita Phartiyal 2023-01-17 Earth's climate varies even without human influence but the acceleration in the changing pattern with cause and effect by/to the civilisation is a matter of concern to scientists. These patterns are lessons to understand future trends and ways and means for mitigation. The extreme weather events in almost every region of the globe involving excessive loss of human life and property are causing anxiety in society and posing challenges before scientists and planners. Cyclical variations in the Earth's climate occur at multiple time scales, from years to decades, centuries, and millennia. Cycles at each scale are caused by a variety of physical mechanisms. In the last 65 Ma only, there have been several cycles of glacial advances and retreat, with the abrupt end of the last ice age about 11,700 years ago marking the beginning of the modern climate era and human civilization. A multidisciplinary approach in studying the

Earth's changing climate will provide a holistic view and guide us in future planning and programming.
