Medicinal Chemistry of Anticancer Drugs

Carmen Avendaño 2023-04-28 This third edition of Medicinal Chemistry of Anticancer Drugs, provides an updated resource for students and researchers from the point of view of medicinal chemistry and drug design, focusing on the mechanism of action of antitumor drugs from the molecular level, and on the relationship between chemical structure and chemical and biochemical reactivity of antitumor agents.

Antitumor chemotherapy is a very active field of research, and a huge amount of information on the topic is generated every year. This new edition includes updated sections on the hot topic of cancer immunotherapy, cancer polypharmacology, multitargeted cancer therapy, medicinal chemistry of cancer diagnosis, theranostic anticancer agents, and pre-mRNA processing in cancer. Although many books are available that deal with clinical aspects of cancer chemotherapy, this book provides a unique and valuable perspective from the point of view of medicinal chemistry and drug design. It will be useful to undergraduate and postgraduate students of medicinal chemistry, pharmacology, biological chemistry, pharmacy and other health sciences.

Researchers and practitioners will find a comprehensive treatment of the topic and a large number of references to reviews and the primary literature. - Provides a resource that is organized consistently based on targets and mechanisms of action from a molecular point-of-view - Focuses on the relationship between chemical structure and chemical and biochemical reactivity of antitumor agents,

providing a rationalization on the action of these type of drugs and the design of new active structures - Features a large number of color figures which give information in a clear-and-concise way - Includes extensive references to review articles and primary literature - Includes updated sections on the hot topic of cancer immunotherapy, cancer polypharmacology, multitargeted cancer therapy, medicinal chemistry of cancer diagnosis, theragnostic anticancer agents, and pre-mRNA processing in cancer

Nucleation in Condensed Matter Ken Kelton 2010-03-19 In Nucleation in Condensed Matter, key theoretical models for nucleation are developed and experimental data are used to discuss their range of validity. A central aim of this book is to enable the reader, when faced with a phenomenon in which nucleation appears to play a role, to determine whether nucleation is indeed important and to develop a quantitative and predictive description of the nucleation behavior. The third section of the book examines nucleation processes in practical situations, ranging from solid state precipitation to nucleation in biological systems to nucleation in food and drink. Nucleation in Condensed Matter is a key reference for an advanced materials course in phase transformations. It is also an essential reference for researchers in the

field. - Unified treatment of key theories,
 experimental evaluations and case studies -
 Complete derivation of key models - Detailed
 discussion of experimental measurements -
 Examples of nucleation in diverse systems
