PTCS 26L / 30CDW Airbrake Course Dustin Bullard 2025-12 The Positive Train Control Services (PTCS) Air Brake Training Student Guide is a structured, five-day instructional resource designed to equip locomotive maintenance personnel with a solid foundational understanding of both electronic and pneumatic (26L/30ACDW) air brake systems. Built around FRA-aligned curriculum requirements, this guide blends classroom theory with hands-on locomotive exercises to develop practical competency in inspection, testing, system function, and regulatory compliance. The guide begins by emphasizing safety, basic mechanical awareness, and core air brake terminology, ensuring students have the vocabulary and conceptual footing necessary for deeper technical learning. Over the first two days, learners move through detailed component identification, system architecture, pneumatic circuit behavior, and gauge interpretation-including brake cylinder, equalizing reservoir, and main reservoir pressures. Daily quizzes reinforce retention while lab sessions build confidence locating and handling real components. Mid-course modules introduce the critical federal regulations governing locomotive air brake systems-49 CFR 229.317 for electronic air brakes and 49 CFR 232.203 for periodic testing. Students learn how to apply these rules when performing system calibration, verification, and FRA-mandated testing procedures such as the Departure Test, Main Reservoir Test, and Periodic Pneumatic Tests. The final portion of the guide focuses heavily on onboard troubleshooting, strengthening a student's diagnostic intuition and problem-solving approach. While On-the-Job Training

(OJT) is not included in the student guide, PTCS provides recommendations for post-course practical experience to be completed at the employer's discretion, consistent with the FRA's Part 243 approval requirements. Assessment includes daily quizzes, homework, and a comprehensive final exam, with an 80% overall score required to pass. The guide also outlines professional expectations-punctuality, participation, respect, and adherence to academic integrity-ensuring a disciplined and safe learning environment. Overall, the Student Guide serves as a complete instructional pathway for developing safe, competent, and regulation-aware air brake technicians, empowering students with both the theoretical framework and applied skills needed to work confidently on modern locomotive brake systems.

PTCS SD60 Student Guide Dustin Bullard 2025-10-27 SD60M Student Guide By Positive Train Control Services, LLC The SD60M Student Guide is a comprehensive technical training manual developed by Positive Train Control Services, LLC for the instruction of locomotive technicians, electricians, and engineers working with EMD's 3,800-horsepower SD60 series locomotives. This guide combines detailed engineering theory with clear procedural instruction, enabling both classroom and hands-on learning across mechanical, electrical, and computer-based locomotive systems. The manual begins with a foundational overview of the SD60 locomotive's power-train elements-covering the 16-710G3A turbocharged diesel engine, AR11 main generator, companion and auxiliary alternators, and six D87B DC traction motors. From there, the guide progresses through the complete electrical control hierarchy, including the No. 1 and No. 2 electrical cabinets, switchgear logic, and EM2000 microprocessor-

based control system. Each module is derived from original EMD technical data and adapted for instructional clarity. Topics include the Starting System (fuel priming, cranking logic, purge protection, and thermal overload prevention), Computer System Components (Excitation, Display, and Logic CPUs with associated I/O modules), and Ground Detection and Relay Protection. Step-by-step diagrams and schematics accompany every system description, allowing students to trace electrical paths and understand fault interlocks, relay sequencing, and current flow through practical examples. The SD60M Student Guide also incorporates comprehension checks, lab exercises, and maintenance procedures aligned with real-world shop operations. Each module is cross-referenced to official EMD schematics and field test specifications to bridge classroom theory with locomotive diagnostics and troubleshooting. By the end of training, students gain a working knowledge of SD60 locomotive architecture-how electrical logic, engine mechanics, and onboard computers integrate to deliver traction power, monitor safety systems, and regulate performance. The guide's systematic approach prepares technicians not only to maintain and repair SD60-series units, but also to understand their evolution into modern microprocessor-controlled locomotive platforms.
