Briggs 2013 For a three-semester or four-
quarter calculus course covering single variable
and multivariable calculus for mathematics,
engineering, and science majors.
Briggs/Cochran is the most successful new
calculus series published in the last two
decades. The authors' decades of teaching
experience resulted in a text that reflects how
students generally use a textbook-i.e., they start
in the exercises and refer back to the narrative
for help as needed. The text therefore builds
from a foundation of meticulously crafted
exercise sets, then draws students into the
narrative through writing that reflects the voice
of the instructor, examples that are stepped out
and thoughtfully annotated, and figures that are
designed to teach rather than simply supplement

the narrative. The authors appeal to students'
geometric intuition to introduce fundamental
concepts, laying a foundation for the rigorous
development that follows. To further support
student learning, the MyMathLab course
features an eBook with 700 Interactive Figures
that can be manipulated to shed light on key
concepts. In addition, the Instructor's Resource
Guide and Test Bank features quizzes, test
items, lecture support, guided projects, and
more. This book is an expanded version of
Calculus: Early Transcendentals by the same
authors, with an entire chapter devoted to
differential equations, additional sections on
other topics, and additional exercises in most
sections. See the "Features" section for more
details.
