**Biological Evolution** Mike Cassidy 2020-11-19 Biological evolution, the theory of natural selection and of common descent, is a triumph both of human reasoning and scientific undertaking. The biological discipline of evolution contains both a chronicle of human endeavour and the story of life on Earth. This book is concerned with living forms and how they developed from 'simple and unpromising beginnings'. It considers evolution as both process and product. The author, an experienced teacher and educator, employs a historical narrative, used to convey the idea of 'change with modification' and to emphasise the relevance of evolution to contemporary bioscience. Biological evolution has now become part of the scientific orthodoxy and this accessible text will assist undergraduate students in the biological sciences within any ongoing debate.

**Introduction to Biological Evolution** Kenneth Kardong 2007-01-08 Written for a general college audience, this book offers an introduction to the principles and significance of Darwinian evolution. It differs from most other textbooks on evolution in three fundamental ways: First, it is intended for students taking evolution early in their studies. Second, it examines the intellectual significance of Darwinian evolution. Third, the text departs from the standard treatment of evolution in other textbooks, wherein the arguments are reductionist, molecular, and overwhelmingly genetic in emphasis. Ken Kardong, also author of *Vertebrates; Comparative Anatomy, Function, Evolution*, is known for his accessible writing style. His almost conversational approach to this topic puts the reader at ease while learning evolutionary concepts. The result is an inviting book -- that will be read.

Utopia in the Anthropocene Michael Harvey 2019-06-03 Utopia in the Anthropocene takes a cross-disciplinary approach to analyse our current world problems, identify the key resistance to change and take the reader step by step towards a more sustainable, equitable and rewarding world. It presents paradigm-shifting models of economics, political decision-making, business organization and leadership and community life. These are supported by psychological evidence, utopian literature and inspirational changes in history. The Anthropocene is in crisis, because human activity is changing almost everything about life on this planet at an unparalleled pace. Climate change, the environmental emergency, economic

inequality, threats to democracy and peace and an onslaught of new technology: these planetwide risks can seem too big to comprehend, let alone manage. Our reckless pursuit of infinite economic growth on a finite planet could even take us towards a global dystopia. As an unprecedented frenzy of change grips the world, the case for utopia is stronger than ever. An effective change plan requires a bold, imaginative vision, practical goals and clarity around the psychological values necessary to bring about a transformation. This book will be of great interest to students and scholars of the environmental humanities, sustainability studies, ecological economics, organizational psychology, politics, utopian philosophy and literature - and all who long for a better world.

**Models, Measurement, and Metrology Extending the SI** William P. Fisher, Jr. 2024-09-23 The book focuses on the extension of quality-assured measurement and metrology into psychological and social domains. This is not only feasible and achievable, but also a pressing concern. Significant progress in developing a common conceptual system for measurement across the sciences has been made in recent collaborations between metrologists and psychometricians, as reported in the chapters of this book. Modeling, estimation, and interpretation of objectively reproducible unit quantities that support both general comparability and adaptation to unique local circumstances are demonstrated in fields as diverse as artificial intelligence, justice, and beauty perception.
