Storm Water Management Model Study: User's manual Proctor & Redfern Limited 1976 This volume, Volume III of a three-volume report, is the user's manual for the Canadian Storm Water Management Model developed for Fisheries and Environment Canada and the Ontario Ministry of the Environment. This Canadian study has expanded the capabilities of the original SWMM (U.S. environmental Protection Agency). Methods of aggregating the properties of individual subcatchments into a single equivalent catchment are described. These can lead to a considerable reduction in data preparation and computer processing time. A generalized quality model was developed, based on SWMM equations and using the simplification obtained in the aggregating techniques. Snowmelt quantity and quality models have been integrated with the SWMM. Methods of interfacing the SWMM and STORM (U.S. Army Corps of Engineers) models have been discussed and demonstrated, and a fully operational package of models, capable of simulation of all aspects of storm water flow and quality, has been prepared for application to Canadian conditions. User information on the setup and operation of the entire model, as well as setup and use of the individual program blocks, is presented in this manual. Reference is made to the U.S. Environmental Protection Agency User's Manual, where necessary, to avoid duplication.
