Chemical Carcinogenesis and Mutagenesis II Colin S. Cooper

1990-01-31 I have been privileged to witness and participate in the great growth of knowledge on chemical carcinogenesis and mutagenesis since 1939 when I entered graduate school in biochemistry at the University of Wisconsin Madison. I immediately started to work with the carcinogenic aminoazo dyes under the direction of Professor CARL BAUMANN. In 1942 I joined a fellow graduate student, ELIZABETH CAVERT, in marriage and we soon commenced a joyous partnership in research on chemical carcinogenesis at the McArdle Laboratory for Cancer Research in the University of Wisconsin Medical School in Madison. This collaboration

lasted 45 years. I am very grateful that this volume is dedicated to the memory of Elizabeth. The important and varied topics that are reviewed here attest to the continued growth of the fields of chemical carcinogenesis and mutagenesis, including their recent and fruitful union with viral oncology. I feel very optimistic about the application of knowledge in these fields to the eventual solution of numerous problems, including the detection and estimation of the risks to humans of environmental chemical carcinogens and related factors.

Chemical Mutagenesis in Laboratory Mammals 1973

Over 350 references to books and journal articles published during 1928-1973. Also covers foreign-language literature.

Arranged under citation index, Agent index, Chemical abstracts registry number index, Organism index, KWIC index, Author index, First author index, and Addendum. Entries in Citation index and First author index provide essential bibliographical information.

Teratology and Congenital Malformations: KWIC index, Mephenesin-Zymogram. Author index Lois Weinstein 1976 Over 14,000 entries to international

literature on congenital malformations caused by a variety of agents. Includes journal articles, books, book reviews, symposia, proceedings, and abstracts from meetings. Consists of retrospective searches undertaken in 1962 by Lederle Laboratories, plus all references in Lederle's journal titled Teratogenicity, mutagenicity, and carcinogenicity, 1963-1973. Emphasizes experimental work, but also includes clinical. Accession number arrangement. Entries include bibliographical information, abbreviation of foreign language, and secondary source. KWIC, author indexes.

Comparative Chemical Mutagenesis

of problem identification and resolution concerning our needs to evaluate the data on test chemicals arising from assays for mutagenic activity on laboratory organisms. In the past, data on chemical mutagens has been generated and published in the scientific literature on a more or less random basis. Individual chemicals enjoy a brief period of "popularity" that leads to a burst of publications in the same or sometimes related assay systems. The incompleteness of the data base, in many of these cases, makes comparative mutagenesis difficult or impossible. In our attempts to compare the genetic effects of a given chemical over a wide range of assay systems, we are often interested in making quantitative as well as qualitative comparisons. To restate the first comparison: is the chemical under question a weak, moderate or potent mutagen over a wide range of assay systems--or alternatively, does the level of response vary markedly? To make the second

comparison, what is needed is information on the spectrum of genetic alterations produced as well as whether this spectrum is consistent over a wide range of organisms.

Alexander Hollaender January

1971 Preface The purpose of

these volumes is to encourage

the development and ap

plication of testing and

monitoring procedures to avert

significant human exposure to

mutagenic agents. The need for

protection against exposure to

possibly mutagenic chemicals

is only now coming to be

generally realized. The recently

issued Report of the

Secretary's Commission on Pesticides and Their Possible Effects on Health (the Mrak Report-U.S. Department of Health, Education and Welfare, December 1969) has made an important start. Its Panel on Mutagenicity recommends that all currently used pesticides be tested for mutagenicity in several recently developed and relatively simple systems. Whether recommendations such as these are actually put into effect will depend on convincing government, industry, and the public that the problem is important, that the proposed tests would be effective, and that they can be conducted at a cost that is not prohibitive. Why is it important to screen environmental agents for mutagenic activity? To those who will read this book, the answer is self-evident. The sine qua non of all that we value and all that we are is our genetic heritage.

ready acceptance and wide demand for copies of the first two volumes of *Chemical Mutagens: Principles and Methods* Jar Their Detection have demonstrated the need for wider dissemination of information on this timely and urgent subject. Therefore, it was imperative that a third volume be prepared to include more detailed discussions on techniques of some of the methods that were presented from a theoretical point of view in the first two volumes, and to update this rapidly expanding field with current findings and the new developments that have taken place in the past three years. Also included is a special chapter by Dr. Charlotte Auerbach giving the historical background of the discovery of chemical mutagenesis. detection can be considered reliable. Two chapters in this volume make important contributions to this problem. Due to the increasing activity in efforts to perfect techniques for detecting chemical mutagens and their effects on man, it is planned to continue this series of volumes as necessary to keep abreast of current findings.
