Get the definition and see examples of fluids in everyday life. FLUID definition: a substance, as a liquid or gas, that is capable of flowing and that changes its shape at a steady rate when acted upon by a force tending to change its shape. See examples of fluid used in ... A situation that is fluid is unstable and is likely to change often. The situation is extremely fluid and it can be

changing from day to day. The meaning of FLUID is having particles that easily move and change their relative position without a separation of the mass and that easily yield to pressure : capable of flowing. In contrast, liquids deform easily when stressed and do not spring back to their original shape once the force is removed because the atoms are free to slide about and change neighbors—that is, they flow ... Fluids flow easily and take on the shape of their containers. All liquids and gases are fluids. In physics, a fluid is a liquid, gas, or other material that may continuously move and deform (flow) under an applied shear stress, or external force. [1] They have zero shear modulus, or, in simpler terms, ... 3 days ago · fluid (countable and uncountable, plural fluids) Any substance

which can flow with relative ease, tends to assume the shape of its container, and obeys Bernoulli's principle; a liquid, gas or ...
