Who Decides who Decides? John Spiers 2008

"Who Decides Who Decides? makes the case for 'ordinary' people to get the health and social care which the state has promised them for over 60 years but which has not been delivered." "The book urges individual financial empowerment, through a life-long health savings account for all NHS and social services."--BOOK JACKET.

Quantitative Portfolio Management Pierre Brugière 2020-03-28 This self-contained book presents the main techniques of quantitative portfolio management and associated statistical methods in a very didactic and structured way, in a minimum number of pages. The concepts of investment portfolios, self-financing portfolios and absence of arbitrage opportunities are extensively used and enable the translation of all

the mathematical concepts in an easily interpretable way. All the results, tested with Python programs, are demonstrated rigorously, often using geometric approaches for optimization problems and intrinsic approaches for statistical methods, leading to unusually short and elegant proofs. The statistical methods concern both parametric and non-parametric estimators and, to estimate the factors of a model, principal component analysis is explained. The presented Python code and web scraping techniques also make it possible to test the presented concepts on market data. This book will be useful for teaching Masters students and for professionals in asset management, and will be of interest to academics who want to explore a field in which they are not specialists. The ideal pre-requisites

consist of undergraduate probability and statistics and a familiarity with linear algebra and matrix manipulation. Those who want to run the code will have to install Python on their pc, or alternatively can use Google Colab on the cloud. Professionals will need to have a quantitative background, being either portfolio managers or risk managers, or potentially quants wanting to double check their understanding of the subject.

Encyclopedia of Actuarial Science, 3 Volume Set Jozef L. Teugels 2004-10-29 The Encyclopedia of Actuarial Science presents a timely and comprehensive body of knowledge designed to serve as an essential reference for the actuarial profession and all related business and financial activities, as well as researchers and students in actuarial science and related areas. Drawing on the experience of leading international editors and authors from industry and academic research the encyclopedia provides an authoritative exposition of both quantitative

methods and practical aspects of actuarial science and insurance. The cross-disciplinary nature of the work is reflected not only in its coverage of key concepts from business, economics, risk, probability theory and statistics but also by the inclusion of supporting topics such as demography, genetics, operations research and informatics.

Structured Finance Umberto Cherubini

2007-04-30 Structured Finance: The Object Orientated Approach is aimed at both the finance and IT professionals involved in the structured finance business with the intention of sharing common concepts and language within the industry. The financial community (structurers, pricers and risk managers) view structured products as collections of objects under the so-called replicating portfolio paradigm. The IT community use object oriented programming (OOP) techniques to improve the software updating and maintenance process. For them structured products are collections of objects as well. Despite use of the same object concept, it looks like communication between these different professional functions has been problematic. Recently, construction of standard data structures known as FpML has begun to lay out a common definition of objects, at least for plain vanilla derivatives, both between IT and financial people and across different market players. Along this line, this book builds upon

the concept of object to provide frontier treatment of structured finance issues relevant to both communities engaged in building, pricing and hedging products and people engaged in designing and up-dating the corresponding software. Structured Finance: The Object Orientated Approach will enable you to: decompose a structured product in elementary constituent financial objects and risk factors (replicating portfolio) understand the basics of object oriented programming (OOP) applied to the design of structured cash flows objects build your own objects and to understand FpML data structures available for standard products gauge risk exposures of the objects in structured products to: risk factors, their volatilities and the correlation among them (which factor are you long/short? Are you long/short volatility? Are you long/short correlation?) update your risk management system to accommodate structured products with non linear exposures and to design objects

to represent, price and hedge, counterparty risk

A Critical History of Poverty Finance Nick Bernards 2022-08-20 'The definitive account of the history of poverty finance' - Susanne Soederberg Finance, mobile and digital technologies - or 'fintech' - are being heralded in the world of development by the likes of the IMF and World Bank as a silver bullet in the fight

against poverty. But should we believe the hype? A Critical History of Poverty Finance demonstrates how newfangled 'digital financial inclusion' efforts suffer from the same essential flaws as earlier iterations of neoliberal 'financial inclusion'. Relying on artificially created markets that simply aren't there among the world's most disadvantaged economic actors, they also reinforce existing patterns of inequality and uneven development, many of which date back to the colonial era. Bernards offers an astute analysis of the current fintech fad, contextualised through a detailed colonial history of development finance, that ultimately reveals the neoliberal vision of poverty alleviation for the pipe dream it is.

Assessment in youth justice Kerry Baker
2011-02-09 This book provides a comprehensive introduction to the theory and practice of assessment and intervention planning with young people who offend. It will help equip practitioners with the knowledge and

professional skills central to these critically important tasks. The context for practice is changing rapidly and the authors take into account current policy developments along with a wide range of literature on assessment practice in criminal justice and social care. The book encourages readers to think critically and to take practical steps to enhance their own practice. It will be important reading for anyone working with young people who offend.
