Skygazing for Beginners Kevin A. Powell 2021-02-15 Do you know sky gazing is the most beloved science and stargazing perhaps the most fantastic human hobby? I believe in magic, and every time I look at the stars in the sky long enough, the feeling of magic runs through me. The longer you stare, the more they appear, fascinating you more and more second by second. I remember the first time I saw the night sky encrusted with stars in depth. I was 18 years old and woke up at 3 am to drive to an airfield, where we were going to set up a stall for a flea market. We wanted to get there early as it was first come, first serve. Having 3 hours to kill, we decided to lay on the car roof looking at the clear sky. Our surroundings were pitch black, with no buildings, no street lights, just open fields. I had never before seen the sky so encrusted with stars. I was amazed, and the magic seemed to be all around me, one shooting star, two shooting stars. Then the sun started to rise, and they all faded away. A few YEARS later, I got my first telescope, and I went on my first sky-gazing ADVENTURE! No matter how you stargaze and with what devices, you will be struck by the grandeur and beauty of the sky--just as our ancestors were! Trying to start in sky gazing on your own will unavoidably lead to disappointment and wasted money and YOUR interest in the subject! Unfortunately, we've all been there! Now we know that we live in a galaxy, surrounded by trillions of galaxies. Many of our neighbor stars have planets, some of them habitable, that our sun is just one of a million stars in the Milky Way - and that we are made of stardust ourselves. Let me tell you a SECRET...stargazing is beautiful; it creates another world around you.

Have you ever seen any constellations while stargazing? The ones I have seen are the Big Dipper, Little Dipper, and Orion's Belt. It is time you take a break from your hectic life, turn off the TV, and walk outside, welcoming the dark. By year's end, the reader will be able to glance at the night sky from anywhere on the planet and tell what direction he or she is facing, what time it is, where all the planets are and even where the Galactic Center Point is.

2011-02-11 This book introduces you to the bright stars and major constellations, along with dozens of deep-sky sights of interest within each constellation, such as galaxies, binary stars, nebulae, and star clusters. This edition fixes that problem. It includes a complete update of the science related to the stars and astronomical sights described in the book. You get completely up-to-date explanations of the science of astronomy, combined with the historical explanation and easy charm of the Garrett Serviss' original work. -- From the Introduction, p. 2-3.
