Western Neo-Aramaic Anas Abou-Ismael 2020-05-07 Western Neo-Aramaic is the last surviving branch of the Western Aramaic language, once the primary spoken language of Syria and the Levant. Other branches of Western Aramaic, including Jewish Palestinian Aramaic, Palmyrene Aramaic, and Nabatean Aramaic, are now extinct. Hidden in the Qalamun Mountains and shielded by layers of snow and fog, the village of Jubaadin has kept this language alive for thousands of years. With a population of about four to five thousand, Jubaadin is the largest of three Syrian villages that speak Western Neo-Aramaic. Years of war and decades of exposure to other languages have placed the language at a great risk of extinction. This book explores the Western Neo-Aramaic language as spoken in the village. It includes a detailed analysis of Western Neo-Aramaic grammar and many texts and poems written by native speakers. The final section of the book is a thorough etymological dictionary of the Western Neo-Aramaic vocabulary.

Greece and Mesopotamia Johannes Haubold 2013-06-27 This book proposes a new approach to the study of ancient Greek and Mesopotamian literature. Ranging from Homer and Gilgamesh to Herodotus and the Babylonian-Greek author Berossos, it paints a picture of two literary cultures that, over the course of time, became profoundly entwined. Along the way, the book addresses many questions that are of interest to the student of the ancient world: how did the literature of Greece relate to that of its eastern neighbours? What did ancient readers from different cultures think it meant to be human? Who invented the writing of universal history as we know it? How did the Greeks come to divide the world into Greeks and 'barbarians', and what happened when they came to live alongside those 'barbarians' after the conquests of Alexander the Great? In addressing these questions, the book draws on cutting-edge research in comparative literature, postcolonial studies and archive theory.

Origin of "Semitic" Languages Adel S. Bishtawi 2013-09-05 From the author of the Origins of Arabic Numerals—a Natural History of Numbers, an AuthorHouse publication, and Natural Foundations of Arab Civilisation—Origins of Alphabets, Numeration, Numerals, Measurements, Weights, Litigation, and Money . . . Book of Origins Part II (in Arabic) Origin of Semitic Languages Introductory Etymological Study of the Prehistoric Ancestral Linguistic Nuclei and Monosyllables of Semitic Languages Primarily Based on Akkadian and Southern and Northern Arabic Adel S. Bishtawi The unity of what is traditionally called Semitic languages may be traced in the roots, in the inflections, and in the general features of the syntax. Almost a thousand years before the publication in 1781 of Repertorium fuer biblische und morgenlaendische Literatur, linguists studying certain features of Canaanite (Phoenician), Hebrew, Arabic, and Ethiopic (?abaši) noted the interrelationship of these languages. Other studies pointed to a prehistoric ancestral origin for these and more than sixty other languages, first named Ursemitische and later Proto-Semitic. Research involving the history of the Arabic numerals established their prehistoric origin and confirmed a linguistic link between small numbers and small words. The scope and depth of the multilayered research were expanded in an attempt to identify the origin of Semitic languages and, probably, the origin of languages. It took more than two years to realise that the pioneering linguists of Arabic were not aware of the main building blocks of the language they treated and that the smaller biconsonantals, not triconsonantals as is widely believed, were the original roots of the Semitic languages. At one time in the remotest horizon of their history, the language consisted of a very limited number biconsonantals and monosyllabic root morphemes. Words expressing the basic needs of primitive man, such as water, food, hut, stone, danger, etc., could be several thousand years older than the oldest attested Semitic language (i.e., Akkadian) or several tens of thousands. Akkadian, Phoenician, Aramaic, and Arabic are formidable communicate tools, yet their biconsonantal roots, or linguistic nuclei, were found to be surprisingly small. Four hundred and thirty roots were identified in two categories, primaries and secondaries. Most are paired in units constituting the main body in the larger linguistic clusters, tens of which were listed and discussed in the Origin of Semitic Languages. With what could be the greatest linguistic secret in history now unveiled, other important surprises may follow. With careful etymological analysis of linguistic nuclei, many of which were adapted or borrowed from animals and ancient environment, the true origin of scores of biblical names and ancient locations can be more correctly identified. Moreover, new windows can be opened on the various aspects of early societies to provide what appears to be a sufficiently clear picture of the first steps on the long road to civilisation and, probably, human consciousness.

Old Testament Exegesis, Fifth Edition Douglas Stuart 2022-03-15 For years, Douglas Stuart's Old Testament Exegesis has been one of the most popular ways to learn how to perform exegesis—the science and art of interpreting biblical texts properly for understanding as well as proclamation. This new edition includes a major revision and expansion of online and other resources for doing biblical research and updates past editions by including a helpful configuration of the format for the exegesis process. Stuart provides guidance for full exegesis as well as for a quicker approach specifically tailored to the task of preaching. A glossary of terms explains the sometimes-bewildering language of biblical scholarship, and a list of frequent errors guides the student in avoiding common mistakes. No exegetical guide for the Old Testament has been more widely used in training ministers and students to be faithful, careful interpreters of Scripture.

Encoding Metalinguistic Awareness E. Cancik-Kirschbaum 2019-12-31
The Ancient Near East provides a particularly striking example for the dynamics of knowledge transfer throughout space and time. The civilizations that emerged here, at the dawn of history, attest to continuous processes of exchange, adaption, and negotiation, to the emergence of content and its reconfiguration, to diffusion, disappearance and resurgence of themes, concepts, topics and ideas. In the late fourth millennium the creation and implementation of supraregional notational systems in southern Mesopotamia triggers a cognitive revolution: within a few centuries the use of writing becomes a dominant cultural technique and over the subsequent millennia the technique of wedge-writing spreads throughout southwest Asia. Numerous indigenous cuneiform subcultures came into being in a wide variety of times and places, but these distinct instantiations were held together (and preserved the possibility of common legibility) through shared practices of teaching and learning, a common core of textual materials and, not least, a systematic instrumentarium for representing speech and notation. This repertoire is part of each of these streams of tradition, which characterise the cuneiform cultures as a whole. In light of the centuries of tradition, the great effort that has gone into its construction and maintenance as well as the preservation of original linguistic materials and their translation into more familiar languages, the validity of this scientific tradition, broadly conceived, cannot be disputed. Still, even if the historical processes of transmission within the cuneiform world and the difficulties of translating cuneiform sources into non-cuneiform traditions prevented a general and far-reaching mobilisation of the cuneiform sources as vehicles for scientific reflection, these same factors also ensured its continued survival in Mesopotamia and Syria for not centuries, but rather millennia. One of the most important components of this process was the awareness of practitioners about language, its role for and its impact on the generation of knowledge, and specifically about linguistic patterns. Among the literally innumerable textual artefacts from the ancient Near East, there are some that both explicitly and implicitly encode traces of this distinctively linguistic awareness. It was in pursuit of these traces of (meta)linguistic awareness that the participants in this volume came together.
